Program Manager for Undergraduate Studies: Dr. Vesna Gasperov, 355 Chandler; 212-854-2017; vg2231@columbia.edu

Biochemistry Advisers:

Please see Dr. Gasperov for your initial advising session for Biochemistry.

Biology: (for course planning queries) Prof. John Hunt, 702A Fairchild; 212-854-5443; jfh21@columbia.edu (stockwell@biology.columbia.edu); (for research and graduate school queries) Prof. James Manley, 1117A Fairchild; 212-854-4647; jlm2@biology.columbia.edu (stockwell@biology.columbia.edu)

Chemistry: Prof. Virginia Cornish, 1209 Northwest Corner Building; 212-854-5209; vc114@columbia.edu (stockwell@biology.columbia.edu)

Chemistry, the study of molecules, is a central science interesting for its own sake but also necessary as an intellectual link to the other sciences of biology, physics, and environmental science. Faculty find the various disciplines of chemistry fascinating because they establish intellectual bridges between the macroscopic or human-scale world that we see, smell, and touch, and the microscopic world that affects every aspect of our lives. The study of chemistry begins on the microscopic scale and extends to engage a variety of different macroscopic contexts.

Chemistry is currently making its largest impact on society at the nexus between chemistry and biology and the nexus between chemistry and engineering, particularly where new materials are being developed. A typical chemistry laboratory now has more computers than test tubes and no longer smells of rotten eggs.

The chemistry department majors are designed to help students focus on these new developments and to understand the factors influencing the nature of the discipline. Because the science is constantly changing, courses change as well, and while organic and physical chemistry remain the bedrock courses, they too differ greatly from the same courses 40 years ago. Many consider biochemistry to be a foundation course as well. Although different paths within the chemistry major take different trajectories, there is a core that provides the essential foundation students need regardless of the path they choose. Students should consider majoring in chemistry if they share or can develop a fascination with the explanatory power that comes with an advanced understanding of the nature and influence of the microscopic world of molecules.

Students who choose to major in chemistry may elect to continue graduate study in this field and obtain a Ph.D. which is a solid basis for a career in research, either in the industry or in a university. A major in chemistry also provides students with an astonishing range of career choices such as working in the chemical or pharmaceutical industries or in many other businesses where a technical background is highly desirable. Other options include becoming a financial analyst for a technical company, a science writer, a high school chemistry teacher, a patent attorney, an environmental consultant, or a hospital laboratory manager, among others. The choices are both numerous and various as well as intellectually exciting and personally fulfilling.

Advanced Placement

The department grants advanced placement (AP) credit for a score of 4 or 5 or the equivalent. The amount of credit granted is based on the results of the department assessment exam and completion of the requisite course. Students who receive permission to register for CHEM UN1604 2ND TERM GEN CHEM (INTENSIVE) are granted 3 points of credit, students who receive permission to register for CHEM UN2045 INTENSIVE ORGANIC CHEMISTRY-CHEM UN2046 INTENSIVE ORG CHEM-FOR 1ST YEAR are granted 6 points of credit. In either case, credit is granted only upon completion of the course with a grade of C or better. Students must complete a department assessment exam prior to registering for either of these courses.

Programs of Study

The Department of Chemistry offers four distinct academic major programs for undergraduates interested in professional-level training and education in the chemical sciences: chemistry, chemical physics, biochemistry and environmental chemistry. For students interested in a program of less extensive study and coursework, the department offers a concentration in chemistry.

Course Information

The results of the department assessment exam are used to advise students which track to pursue. The Department of Chemistry offers three different tracks. Students who wish to take Track 2 or 3 classes must take the department assessment exam. Students who wish to pursue Track 1 classes do not need to take the assessment exam.

Track Information

In the first year, Track 1 students with one year of high school chemistry take a one-year course in general chemistry, and the one-term laboratory course that accompanies it. In the second year, students study organic chemistry, and take organic chemistry laboratory.

Students who qualify by prior assessment during orientation week can place into the advanced tracks. There are two options. Track 2 students take, in the fall term, a special one-term intensive course in general chemistry in place of the one-year course. In the second year, students study organic chemistry and take organic chemistry laboratory. Track 3 students take a one-year course in organic chemistry for first-year students and the one-term intensive general chemistry laboratory course. In the second year, students enroll in physical chemistry and the organic chemistry laboratory course.

Additional information on the tracks can be found in the Requirements section.

Additional Courses

First-year students may also elect to take CHEM UN2408. This seminar focuses on topics in modern chemistry, and is offered to all students who have taken at least one semester of college chemistry and have an interest in chemical research.

Biochemistry (BIOC GU4501, BIOC GU4512) is recommended for students interested in the biomedical sciences.

Physical chemistry (CHEM UN3079-CHEM UN3080), a one-year program, requires prior preparation in mathematics and physics. The accompanying laboratory is CHEM UN3085-CHEM UN3086.
Also offered are a senior seminar (CHEM UN3920); advanced courses in biochemistry, inorganic, organic, and physical chemistry; and an introduction to research (CHEM UN3098).

Sample Programs

Some typical programs are shown below. Programs are crafted by the student and the Director of Undergraduate Studies and Program Manager to meet individual needs and interests.

**Track 1**

**First Year**

- **CHEM UN1403** GENERAL CHEMISTRY I-LECTURES
- **CHEM UN1404** GENERAL CHEMISTRY II-LECTURES
- **CHEM UN1500** GENERAL CHEMISTRY LABORATORY
- **CHEM UN2408** 1ST YEAR SEM IN CHEMICAL RES

Calculus and physics as required.

**Second Year**

- **CHEM UN2443** ORGANIC CHEMISTRY I-LECTURES
- **CHEM UN2444** ORGANIC CHEMISTRY II-LECTURES
- **CHEM UN2493** ORGANIC CHEM. LAB I TECHNIQUES
- **CHEM UN2494** ORGANIC CHEM. LAB II SYNTHESIS

Calculus and physics as required.

**Third Year**

- **CHEM UN3079** PHYSICAL CHEMISTRY I-LECTURES
- **CHEM UN3080** PHYSICAL CHEMISTRY II-LECTURES
- **BIOC GU4501** BIOCHEM I-STRUCTURE/METABOLISM
- **CHEM UN3546** ADVANCED ORGANIC CHEMISTRY LAB
- **CHEM UN3098** SUPERVISED INDEPENDENT RES

**Fourth Year**

- **CHEM UN3085** PHYSICL-ANALYTCL LABORATORY I
- **CHEM UN3086** PHYSICL-ANALYTCL LABORATORY II
- **CHEM UN3920** SENIOR SEMINAR
- **CHEM GU4071** INORGANIC CHEMISTRY

Advanced courses (4000-level or higher)

**Track 2**

**First Year**

- **CHEM UN1507** INTENSIVE GENERAL CHEMISTRY-LAB
- **CHEM UN1604** 2ND TERM GEN CHEM (INTENSIVE)
- **CHEM UN2408** 1ST YEAR SEM IN CHEMICAL RES

Calculus and physics as required.

**Second Year**

- **CHEM UN2443** ORGANIC CHEMISTRY I-LECTURES
- **CHEM UN2444** ORGANIC CHEMISTRY II-LECTURES
- **CHEM UN2493** ORGANIC CHEM. LAB I TECHNIQUES
- **CHEM UN2494** ORGANIC CHEM. LAB II SYNTHESIS

Calculus and physics as required.

**Third Year**

- **CHEM UN3079** PHYSICAL CHEMISTRY I-LECTURES
- **CHEM UN3080** PHYSICAL CHEMISTRY II-LECTURES
- **BIOC GU4501** BIOCHEM I-STRUCTURE/METABOLISM
- **CHEM UN3546** ADVANCED ORGANIC CHEMISTRY LAB

**Fourth Year**

- **CHEM UN3920** SENIOR SEMINAR

Advanced courses (4000-level or higher)

**Track 3**

**First Year**

- **CHEM UN1507** INTENSIVE GENERAL CHEMISTRY-LAB
- **CHEM UN2045** INTENSIVE ORGANIC CHEMISTRY
- **CHEM UN2408** 1ST YEAR SEM IN CHEMICAL RES

Calculus and Physics as required.

**Second Year**

- **CHEM UN2046** INTENSIVE ORG CHEM-FOR 1ST YEAR
- **CHEM UN3079** PHYSICAL CHEMISTRY I-LECTURES
- **CHEM UN3080** PHYSICAL CHEMISTRY II-LECTURES
- **CHEM UN2545** INTENSIVE ORGANIC CHEM LAB
- **CHEM UN3546** ADVANCED ORGANIC CHEMISTRY LAB

Calculus and physics as required.

**Third Year**

- **BIOC GU4501** BIOCHEM I-STRUCTURE/METABOLISM
- **CHEM UN3085** PHYSICL-ANALYTCL LABORATORY I
- **CHEM UN3086** PHYSICL-ANALYTCL LABORATORY II
- **CHEM UN3920** SUPERVISED INDEPENDENT RES
- **CHEM GU4071** INORGANIC CHEMISTRY

**Fourth Year**

- **CHEM UN3920** SENIOR SEMINAR

Advanced courses (4000-level or higher)

**Professors**

Virginia W. Cornish  
Richard A. Friesner  
Ruben Gonzalez  
Laura Kaufman  
James L. Leighton  
Ann E. McDermott  
Wei Min  
Jack R. Norton  
Colin Nuckolls  
Gerard Parkin  
David R. Reichman  
Tomislav Rovis  
Dalibor Sames  
Brent Stockwell  
James J. Valentini  
Latha Venkataraman  
Xiaoyang Zhu

**Associate Professors**

Angelo Cacciuto  
Luis Campos  
Jonathan Owen
Guidelines for all Chemistry Majors, Concentrators, and Interdepartmental Majors

Students majoring in chemistry or in one of the interdepartmental majors in chemistry should go to the director of undergraduate studies or the undergraduate program manager in the Department of Chemistry to discuss their program of study. Chemistry majors and interdepartmental majors usually postpone part of the Core Curriculum beyond the sophomore year.

Chemistry Tracks

All students who wish to start with Track 2 or 3 courses must take an assessment during orientation week ahead of fall semester. The results of the assessment are used to advise students which track to pursue. Unless otherwise specified below, all students must complete one of the following tracks:

**Track 1**
- CHEM UN1403 GENERAL CHEMISTRY I-LECTURES
- CHEM UN1404 GENERAL CHEMISTRY II-LECTURES
- CHEM UN1500 GENERAL CHEMISTRY LABORATORY
- CHEM UN2443 ORGANIC CHEMISTRY I-LECTURES
- CHEM UN2444 ORGANIC CHEMISTRY II-LECTURES
- CHEM UN2493 ORGANIC CHEM. LAB I TECHNIQUES
- CHEM UN2494 ORGANIC CHEM. LAB II SYNTHESIS

**Track 2**
- CHEM UN1500 GENERAL CHEMISTRY LABORATORY
- CHEM UN1507 INTENSIVE GENERAL CHEMISTRY-LAB
- CHEM UN1604 2ND TERM GEN CHEM (INTENSIVE)
- CHEM UN2443 ORGANIC CHEMISTRY I-LECTURES
- CHEM UN2444 ORGANIC CHEMISTRY II-LECTURES
- CHEM UN2493 ORGANIC CHEM. LAB I TECHNIQUES
- CHEM UN2494 ORGANIC CHEM. LAB II SYNTHESIS

**Track 3**
- CHEM UN1507 INTENSIVE GENERAL CHEMISTRY-LAB
- CHEM UN2045 INTENSIVE ORGANIC CHEMISTRY
- CHEM UN2046 INTENSIVE ORG CHEM-FOR 1ST YEAR
- CHEM UN2545 INTENSIVE ORGANIC CHEM LAB

Physics Sequences

Unless otherwise specified below, all students must complete one of the following sequences:

**Sequence A**
For students with limited background in high school physics:
- PHYS UN1401 INTRO TO MECHANICS # THERMO
- PHYS UN1402 INTRO ELEC/MAGNETSM # OPTCS
- PHYS UN1403 INTRO-CLASSCL # QUANTUM WAVES

For chemistry majors, the following laboratory courses are recommended, NOT required. For chemical physics majors, the following laboratory courses are required:
- PHYS UN1494 INTRO TO EXPERIMENTAL PHYS-LAB
- PHYS UN2699 Experiments in Classical and Modern Physics
- PHYS UN3081 INTERMEDIATE LABORATORY WORK

**Sequence B**
- PHYS UN1601 PHYSICS I:MECHANICS/RELATIVITY
- PHYS UN1602 PHYSICS II: THERMO, ELEC # MAG
- PHYS UN2601 PHYSICS III:CLASS/QUANTUM WAVE

For chemistry majors, the following laboratory courses are recommended NOT required. For chemical physics majors, the following laboratory courses are required:
- PHYS UN2699 Experiments in Classical and Modern Physics
- PHYS UN3081 INTERMEDIATE LABORATORY WORK

**Sequence C**
For students with advanced preparation in physics and mathematics:
- PHYS UN2801 - PHYS UN2802 ACCELERATED PHYSICS I and ACCELERATED PHYSICS II

For chemistry majors, the following laboratory courses are recommended NOT required. For chemical physics majors, the following laboratory courses are required:
- PHYS UN2699 Experiments in Classical and Modern Physics
- or PHYS UN3081 INTERMEDIATE LABORATORY WORK

**Major in Chemistry**

Select one of the tracks outlined above in Guidelines for all Chemistry Majors, Concentrators, and Interdepartmental Majors and complete the following lectures and labs.

**Chemistry**

Select one of the chemistry tracks outlined above.
- CHEM UN2408 1ST YEAR SEM IN CHEMICAL RES (Recommended NOT required)
- CHEM UN3079 PHYSICAL CHEMISTRY I-LECTURES
- CHEM UN3080 PHYSICAL CHEMISTRY II-LECTURES
- CHEM UN3085 PHYSICL-ANALYTCL LABORATORY I
Major in Biochemistry
Select one of the tracks outlined above in Guidelines for all Chemistry Majors, Concentrators, and Interdepartmental Majors and complete the following lectures and labs.

**Chemistry**
Select one of the chemistry tracks outlined above.

<table>
<thead>
<tr>

</table>
Major in Chemical Physics
Select one of the tracks outlined above in Guidelines for all Chemistry Majors, Concentrators, and Interdepartmental Majors and complete the following lectures and labs.

Chemistry
Select one of the chemistry tracks outlined above.
CHEM UN3079 PHYSICAL CHEMISTRY I-LECTURES
CHEM UN3080 PHYSICAL CHEMISTRY II-LECTURES
CHEM UN3085 PHYSICL-ANALYTCL LABORATORY I
CHEM UN3086 PHYSICL-ANALYTCL LABORATORY II
CHEM UN3920 SENIOR SEMINAR
CHEM GU4221 QUANTUM CHEMISTRY I
or PHYS GU4021 QUANTUM MECHANICS I

Physics
Select one of the physics sequences outlined above in Guidelines for all Chemistry Majors, Concentrators and Interdepartmental Majors. For the chemical physics major, one lab MUST be completed for the sequence chosen.
Complete the following lectures:
PHYS UN3003 MECHANICS
PHYS UN3007 ELECTRICITY-MAGNETISM
PHYS UN3008 ELECTROMAGNETIC WAVES # OPTICS

Mathematics
Select one of the following sequences:
Four semesters of calculus:
MATH UN1101 CALCULUS I
- MATH UN1102 and CALCULUS II
- MATH UN1201 and CALCULUS III
- MATH UN1202 and CALCULUS IV

Two semesters of honors mathematics:
MATH UN1207 HONORS MATHEMATICS A
- MATH UN1208 and HONORS MATHEMATICS B
- MATH UN3027 and Ordinary Differential Equations

Two semesters of advanced calculus:
MATH UN1202 CALCULUS IV
- MATH UN3027 and Ordinary Differential Equations

Major in Environmental Chemistry
The requirements for this program were modified on February 1, 2016. Students who declared this program before this date should contact the director of undergraduate studies for the department in order to confirm their correct course of study.
Select one of the tracks outlined above in Guidelines for all Chemistry Majors, Concentrators, and Interdepartmental Majors and complete the following lectures and labs.

Chemistry
Select one of the chemistry tracks outlined above. A second semester of Organic Chemistry lecture is recommended NOT required.
CHEM UN3079 PHYSICAL CHEMISTRY I-LECTURES
CHEM GU4071 INORGANIC CHEMISTRY
The following courses are recommended NOT required:
CHEM UN2408 1ST YEAR SEM IN CHEMICAL RES
CHEM UN3920 SENIOR SEMINAR

Earth and Environmental Science
Select two of the following three courses:
EESC UN2100 EARTH’S ENVIRO SYST: CLIM SYST
EESC UN2200 EARTH’S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH
EESC UN2300 EARTH’S ENVIRO SYST: LIFE SYST

Additional course required:
EESC UN3101 Geochemistry for a Habitable Planet

Select one of the following labs:
EESC BC3016 ENVIRONMENTAL MEASURMENTS
CHEM UN3085 PHYSICL-ANALYTCL LABORATORY I
Select one option for Independent Research in Environmental Chemistry:
EESC BC3800 - EESC BC3801 ENVIR SCIENCE SENIOR SEMINAR
- CHEM UN3920 SUPERVISED INDEPENDENT RES
  (It is strongly recommended to take CHEM UN3920 if taking CHEM UN3098)

Physics
Select one of the following physics sequences:
Sequence A:
PHYS UN1201 and GENERAL PHYSICS I
- PHYS UN1202 and GENERAL PHYSICS II

Sequence B:
PHYS UN1401 INTRO TO MECHANICS # THERMO
- PHYS UN1402 and INTRO ELEC/MAGNETSM # OPTCS
- PHYS UN1403 and INTRO-CLASSCL # QUANTUM WAVES (Recommended NOT required)

Sequence C:
PHYS UN1601 PHYSICS I:MECHANICS/RELATIVITY
- PHYS UN1602 and PHYSICS II: THERMO, ELEC # MAG
- PHYS UN2601 and PHYSICS III:CLASS/QUANTUM WAVE (Recommended, not required)

Sequence D:
PHYS UN2801 ACCELERATED PHYSICS I
- PHYS UN2902 and ACCELERATED PHYSICS II

Mathematics
Two semesters of calculus:
MATH UN1101 CALCULUS I
MATH UN1102 CALCULUS II
MATH UN1201 CALCULUS III
MATH UN1202 CALCULUS IV

Additional Courses
Select any two of the following:
Chemistry:
CHEM UN3080 PHYSICAL CHEMISTRY II-LECTURES
CHEM GU4103 ORGANOMETALLIC CHEMISTRY
CHEM GU4147 ADVANCED ORGANIC CHEMISTRY I

Earth and Environmental Science:
EESC BC3017 ENVIRONMENTAL DATA ANALYSIS
EESC BC3025 HYDROLOGY
EESC GU4008 Introduction to Atmospheric Science
EESC GU4009 CHEMICAL GEOLOGY
EESC GU4040 CLIM THERMODYN/ENERGY TRANSFER
EESC GU4050 GLOBAL ASSMT-REMOTE SENSING
EESC GU4600 EARTH RESOURCES # SUSTAIN DEV
EESC GU4835 WETLANDS AND CLIM SYST
EESC GU4885 CHEMISTRY OF CONTINENTL WATERS
EESC GU4888 STABLE ISOTOPE GEOCHEMISTRY
EESC GU4924 INTRO TO ATMOSPHERIC CHEMISTRY
EESC GU4925 Principles of Physical Oceanography
Concentration in Chemistry

No more than four points of CHEM UN3098 SUPERVISED INDEPENDENT RES may be counted toward the concentration.

Select one of the three chemistry tracks listed below.

**Chemistry Tracks**

**Track 1**
- CHEM UN1403 GENERAL CHEMISTRY I-LECTURES
- CHEM UN1404 GENERAL CHEMISTRY II-LECTURES
- CHEM UN1500 GENERAL CHEMISTRY LABORATORY

Select 22 points of chemistry at the 2000-level or higher (excluding CHEM UN2408).

**Track 2**
- CHEM UN1500 GENERAL CHEMISTRY LABORATORY
- or CHEM UN1507 INTENSIVE GENERAL CHEMISTRY-LAB
- CHEM UN1604 2ND TERM GEN CHEM (INTENSIVE)

Select 22 points of chemistry at the 2000-level or higher (excluding CHEM UN2408).

**Track 3**
- CHEM UN1507 INTENSIVE GENERAL CHEMISTRY-LAB
- CHEM UN2045 INTENSIVE ORGANIC CHEMISTRY
- CHEM UN2046 INTENSIVE ORG CHEM-FOR 1ST YEAR

Select 18 points of chemistry at the 2000-level or higher (excluding CHEM UN2408).

**CHEM UN0001 PREPARATION-COLLEGE CHEMISTRY. 0.00 points.**

Not for credit toward the bachelor’s degree. Given on a Pass/Fail basis only.

Prerequisites: High school algebra or the instructor’s permission.

Recommended preparation: high school physics and chemistry.

Prerequisites: High school algebra or the instructor’s permission.

Recommended preparation: high school physics and chemistry. This course is preparation for Chemistry UN1403 or the equivalent, as well as for other science courses. It is intended for students who have not attended school for sometime or who do not have a firm grasp of high school chemistry. Topics include inorganic nomenclature, chemical reactions, chemical bonding and its relation to molecular structure, stoichiometry, periodic properties of elements, chemical equilibrium, gas laws, acids and bases, and electrochemistry.

**Fall 2023**

Please note that some lab fees have increased. You may consult the Directory of Classes for the most up to date fees.

**CHEM UN1403 GENERAL CHEMISTRY I-LECTURES. 4.00 points.**

Corequisites: MATH UN1101

Corequisites: MATH UN1101 Preparation equivalent to one year of high school chemistry is assumed. Students lacking such preparation should plan independent study of chemistry over the summer or take CHEM UN0001 before taking CHEM UN1403. Topics include stoichiometry, states of matter, nuclear properties, electronic structures of atoms, periodic properties, chemical bonding, molecular geometry, introduction to quantum mechanics and atomic theory, introduction to organic and biological chemistry, solid state and materials science, polymer science and macromolecular structures and coordination chemistry. Although CHEM UN1403 and CHEM UN1404 are separate courses, students are expected to take both terms sequentially. The order of presentation of topics may differ from the order presented here, and from year to year. Students must ensure they register for the recitation that corresponds to the lecture section. When registering, please add your name to the wait list for the recitation corresponding to the lecture section (1405 for lecture sec 001; 1407 for lecture sec 002; 1409 for lecture sec 003; 1411 for lecture sec 004). Information about recitation registration will be sent out before classes begin. DO NOT EMAIL THE INSTRUCTOR. Please check the Directory of Classes for details.

CHEM UN1500 GENERAL CHEMISTRY LABORATORY. 3.00 points. 
CC/GS: Partial Fulfillment of Science Requirement 
Lab Fee: $140.

Corequisites: CHEM UN1403, CHEM UN1404
Corequisites: CHEM UN1403, CHEM UN1404 An introduction to basic lab techniques of modern experimental chemistry, including quantitative procedures and chemical analysis. Students must register for a Lab Lecture section for this course (CHEM UN1500 Sec 1, 2, 5, 7 and CHEM UN1501 Sec 1). Participation in voluntary

CHEM UN1501 INTENSIVE GENERAL CHEMISTRY-LAB. 3.00 points. 
CC/GS: Partial Fulfillment of Science Requirement 
Lab Fee: $140.

Prerequisites: CHEM UN1604 or CHEM UN2045
Corequisites: CHEM UN2045
Prerequisites: CHEM UN1604 or CHEM UN2045 Corequisites: CHEM UN2045 A student-centered experimental course intended for students who are taking or have completed CHEM UN1604 (Second Semester General Chemistry Intensive Lecture offered in Fall), CHEM UN2045 (Intensive Organic Chemistry offered in Fall), or CHEM UN2046 (Intensive Organic Chemistry Lecture offered in Spring). The course will provide an introduction to theory and practice of modern experimental chemistry in a contextual, student-centered collaborative learning environment. This course differs from CHEM UN1500 in its pedagogy and its emphasis on instrumentation and methods. Students must also attend the compulsory Mentoring Session. Please check the Directory of Classes for details. Please note that CHEM UN1507 is offered in the fall and spring semesters

CHEM UN1604 2ND TERM GEN CHEM (INTENSIVE). 4.00 points. 
CC/GS: Partial Fulfillment of Science Requirement

Prerequisites: Acceptable performance on the Department placement exam during orientation week AND either a grade of "B" or better in CHEM UN1403 or AP chemistry or the equivalent. 
Corequisites: MATH UN1102
Prerequisites: Acceptable performance on the Department placement exam during orientation week AND either a grade of "B" or better in CHEM UN1403 or AP chemistry or the equivalent. Please contact Vesna Gasperov (vg2231@columbia.edu) or your academic advisor at CSA for further information. Corequisites: MATH UN1102 Topics include chemical kinetics, thermodynamics and chemical bonding. Students must register simultaneously for a corresponding recitation section. Please check Courseworks or contact the instructor or departmental adviser for additional details. When registering, be sure to add your name to the wait list for the recitation corresponding to the lecture section (CHEM UN1606). Information about registration for the required recitation will be sent out before classes begin. Please expect to also be available for review sessions on Fridays from 8:10am-9:55am
CHEM UN2443 ORGANIC CHEMISTRY I-LECTURES. 4.00 points.
Prerequisites: (CHEM UN1403 and CHEM UN1404) or CHEM UN1604
The principles of organic chemistry. The structure and reactivity of organic molecules are examined from the standpoint of modern theories of chemistry. Topics include stereochemistry, reactions of organic molecules, mechanisms of organic reactions, syntheses and degradations of organic molecules, and spectroscopic techniques of structure determination. Although CHEM UN2443 and CHEM UN2444 are separate courses, students are expected to take both terms sequentially. Students must ensure they register for the recitation which corresponds to the lecture section. Please check the Directory of Classes for details.

CHEM 2443

004/18160 M W 2:40pm - 3:55pm 303 Uris Hall  James Leighton  4.00  7/60

CHEM UN2493 ORGANIC CHEM. LAB I TECHNIQUES. 0.00 points.
Lab Fee: $63.00
Prerequisites: (CHEM UN1403 and CHEM UN1404) or (CHEM UN1604) and (CHEM UN1500 or CHEM UN1507)
Corequisites: CHEM UN2443
The course is the lab lecture which accompanies the Organic Chemistry Laboratory I (Techniques) course. Students must register for the lab lecture section (CHEM UN2493) which corresponds to their lab section. Students must attend ONE lab lecture and ONE lab section every other week.
Please contact your advisers for further information.

CHEM UN2495 ORGANIC CHEM. LABORATORY I. 1.50 point.
Corequisites: CHEM UN2493
The course is the lab lecture which accompanies the Organic Chemistry Laboratory I (Techniques) course.

CHEM 2495
Number  Course  Fall 2023: CHEM UN2495
001/11080 W 4:10pm - 5:25pm 309 Havemeyer Hall  Talha Siddiqui  1.50  83/110

CHEM 2495
Number  Course  Fall 2023: CHEM UN2495
002/11081 M 4:10pm - 5:25pm 309 Havemeyer Hall  Anna Ghurbanyan  1.50  95/110

CHEM 2495
Number  Course  Fall 2023: CHEM UN2495
003/11082 W 4:10pm - 5:25pm 309 Havemeyer Hall  Talha Siddiqui  1.50  29/110

CHEM 2495
Number  Course  Fall 2023: CHEM UN2495
004/11083 M 4:10pm - 5:25pm 309 Havemeyer Hall  Anna Ghurbanyan  1.50  33/110
CHEM UN2545 INTENSIVE ORGANIC CHEM LAB. 3.00 points.
Lab Fee: $125.

Prerequisites: (CHEM UN2045 and CHEM UN2046) and CHEM UN1507
Prerequisites: (CHEM UN2045 and CHEM UN2046) and CHEM UN1507
The lab is intended for students who have taken Intensive Organic Chemistry, CHEM UN2045 - CHEM UN2046 and who intend to major in Chemistry, Biochemistry, Chemical Physics, or Environmental Chemistry

CHEM UN3079 PHYSICAL CHEMISTRY I-LECTURES. 4.00 points.
Prerequisites: (CHEM UN1403 and CHEM UN1404) or (CHEM UN1604) or (CHEM UN2045 and CHEM UN2046) and (MATH UN1101 and MATH UN1102) or (MATH UN1207 and MATH UN1208) and (PHYS UN1401 and PHYS UN1402) PHYS UN1201 - PHYS UN1202 is acceptable; PHYS UN1401 - PHYS UN1402 or the equivalent is HIGHLY recommended.
Corequisites: CHEM UN3085
Prerequisites: (CHEM UN1403 and CHEM UN1404) or (CHEM UN1604) or (CHEM UN2045 and CHEM UN2046) and (MATH UN1101 and MATH UN1102) or (MATH UN1207 and MATH UN1208) and (PHYS UN1401 and PHYS UN1402) PHYS UN1201 - PHYS UN1202 is acceptable; PHYS UN1401 - PHYS UN1402 or the equivalent is HIGHLY recommended.
Corequisites: CHEM UN3085 Elementary, but comprehensive, treatment of the fundamental laws governing the behavior of individual atoms and molecules and collections of them. CHEM UN3079 covers the thermodynamics of chemical systems at equilibrium and the chemical kinetics of nonequilibrium systems. Although CHEM UN3079 and CHEM UN3080 are separate courses, students are expected to take both terms sequentially. A recitation section is required. Please check the Directory of Classes for details and also speak with the TA for the course

CHEM UN3085 PHYSICL-ANALYTICL LABORATORY I. 4.00 points.
Lab Fee: $125 per term.
Corequisites: CHEM UN3079
Corequisites: CHEM UN3079 A student-centered experimental course intended for students who are co-registered or have completed CHEM UN3079 and CHEM UN3080. The course emphasizes techniques of experimental physical chemistry and instrumental analysis, including vibrational, electronic, and laser spectroscopy; electroanalytical methods; calorimetry; reaction kinetics; hydrodynamic methods; scanning probe microscopy; applications of computers to reduce experimental data; and computational chemistry. Students must also attend the compulsory Mentoring Session. Please check the Directory of Classes for details

CHEM UN3098 SUPERVISED INDEPENDENT RES. 4.00 points.
Lab Fee: $105 per term.
Prerequisites: the instructor’s permission for entrance, and the departmental representative’s permission for aggregate points in excess of 12 or less than 4.
Prerequisites: the instructors permission for entrance, and the departmental representatives permission for aggregate points in excess of 12 or less than 4. This course may be repeated for credit (see major and concentration requirements). Individual research under the supervision of a member of the staff. Research areas include organic, physical, inorganic, analytical, and biological chemistry. Please note that CHEM UN3098 is offered in the fall and spring semesters

CHEM UN3920 SENIOR SEMINAR. 2.00 points.
Pass/Fail credit only.
Open to senior chemistry, biochemistry, environmental chemistry, and chemical physics majors; senior chemistry concentrators; and students who have taken or are currently enrolled in CHEM UN3098. Senior seminar provides direct access to modern chemical research through selected studies by the students from active fields of chemical research. Topics to be presented and discussed draw from the current scientific literature and/or UN3098 research

BCHM UN3300 BIOCHEMISTRY. 3.00 points.
Prerequisites: one year each of Introductory Biology and General Chemistry. Corequisites: Organic Chemistry. Biochemistry is the study of the chemical processes within organisms that give rise to the immense complexity of life. This complexity emerges from a highly regulated and coordinated flow of chemical energy from one biomolecule to another. This course serves to familiarize students with the spectrum of biomolecules (carbohydrates, lipids, amino acids, nucleic acids, etc.) as well as the fundamental chemical processes (glycolysis, citric acid cycle, fatty acid metabolism, etc.) that allow life to happen. In particular, this course will employ active learning techniques and critical thinking problem-solving to engage students in answering the question: how is the complexity of life possible? NOTE: While Organic Chemistry is listed as a corequisite, it is highly recommended that you take Organic Chemistry beforehand
**BIOC GU4501 BIOCHEM I-STRUCTURE/METABOLISM. 4.00 points.**
Undergraduates should register for BIOC UN3501.

Prerequisites: BIOL UN2005 and BIOL UN2006 and CHEM UN2443 and CHEM UN2444 one year of intro biology and one year of organic chemistry.

In this course, we will study the chemistry of living systems. We will discuss how living systems convert environmental resources into energy, and how they use this energy and these materials to build the molecules required for the diverse functions of life. Finally, we will discuss the applications of such biochemical knowledge to mechanisms of disease and to drug discovery. At a high level, we expect that at the conclusion of the course, you should be able to explain the basic mechanisms by which living systems harness energy from their environment, how living systems construct the molecules necessary for the functions of life, how these processes go awry in a variety of disease, including cancer, and how drugs can be discovered to treat such diseases. Using this knowledge, you will be able to diagram the major metabolic pathways and compare how these pathways are dysregulated in normal tissues in and disease states. In addition, you will learn which techniques are used to uncover this knowledge and how to design and interpret experiments that will address these questions. You will also collaborate with other students in the analysis and interpretation of biochemical data, and be able to communicate, defend and refute interpretations of data. In this course, we assume familiarity with basic concepts of modern biology, so having completed one year of college-level biology is required. In addition, we explore the reaction mechanisms governing a variety of transformations in metabolism. You must have completed one year of organic chemistry prior to taking this course.

**CHEM GU4071 INORGANIC CHEMISTRY. 4.50 points.**
CC/GS: Partial Fulfillment of Science Requirement

Prerequisites: (CHEM UN1403 and CHEM UN1404) or (CHEM UN1604) or (CHEM UN2045 and CHEM UN2046), or the equivalent.

Prerequisites: (CHEM UN1403 and CHEM UN1404) or (CHEM UN1604) or (CHEM UN2045 and CHEM UN2046), or the equivalent. Principles governing the structure and reactivity of inorganic compounds surveyed from experimental and theoretical viewpoints. Topics include inorganic solids, aqueous and nonaqueous solutions, the chemistry of selected main group elements, transition metal chemistry, metal clusters, metal carbonyls, and organometallic chemistry, bonding and resonance, symmetry and molecular orbitals, and spectroscopy

**CHEM GU4147 ADVANCED ORGANIC CHEMISTRY I. 4.50 points.**
Prerequisites: Elementary organic and physical chemistry. Prerequisites: elementary organic and physical chemistry. The mechanisms of organic reactions, structure of organic molecules, and theories of reactivity. How reactive intermediates are recognized and mechanisms are deduced using kinetics, stereochemistry, isotopes, and physical measurements

**CHEM GU4148 SYNTHETIC METHODS-ORGANIC CHEM. 4.50 points.**
Prerequisites: Organic chemistry.

This course is intended for graduate students and advanced undergraduate students. The main purpose of the course is to introduce students to modern synthetic chemistry via the selected series of topics (synthetic planning and the logic of organic assembly, classical and new reactions/methods and their use in complex target synthesis). Mechanistic underpinning of the discussed reaction processes will also be briefly discussed. For each module (see the content below), specific examples of syntheses of natural products and/or synthetic materials will be provided. In addition to lectures by Prof. Sames, students will select and present relevant papers in the class (the number of student symposia will depend on the final enrollment in this course). The basic knowledge of transition metal chemistry is recommended for the cross-coupling reactions (i.e. structure, electron counting, and elemental reaction types of transition metals)

**CHEM GU4221 QUANTUM CHEMISTRY I. 4.50 points.**
Prerequisites: elementary physical chemistry. Basic quantum mechanics: the Schrodinger equation and its interpretation, exact solutions in simple cases, methods or approximations including time-independent and time-dependent perturbation theory, spin and orbital angular momentum, spin-spin interactions, and an introduction to atomic and molecular structure

**CHEM GU4230 STATISTICAL THERMODYNAMICS. 4.50 points.**
Prerequisites: elementary physical chemistry. Corequisites: CHEM G4221. Topics include the classical and quantum statistical mechanics of gases, liquids, and solids

**CHEM GU4312 CHEMICAL BIOLOGY. 4.00 points.**
Prerequisites: (CHEM UN2443 and CHEM UN2444) and (CHEM UN3079 and CHEM UN3080) and (BIOC UN3501) , or the equivalent.

Prerequisites: (CHEM UN2443 and CHEM UN2444) and (CHEM UN3079 and CHEM UN3080) and (BIOC UN3501) , or the equivalent. Development and application of chemical methods for understanding the molecular mechanisms of cellular processes. Review of the biosynthesis, chemical synthesis, and structure and function of proteins and nucleic acids. Application of chemical methods–including structural biology, enzymology, chemical genetics, and the synthesis of modified biological molecules–to the study of cellular processes–including transcription, translation, and signal transduction

BIOC GU4323 Biophysical Chemistry I. 4 points.
This course provides a rigorous introduction to the theory underlying widely used biophysical methods, which will be illustrated by practical applications to contemporary biomedical research problems. The course has two equally important goals. The first goal is to explicate the fundamental approaches used by physical chemists to understand the behavior of molecules and to develop related analytical tools. The second goal is to prepare students to apply these methods themselves to their own research projects. The course will be divided into seven modules: (i) solution thermodynamics; (ii) hydrodynamic methods; (iii) statistical analysis of experimental data; (iv) basic quantum mechanics; (v) optical spectroscopy with an emphasis on fluorescence; (vi) nuclear magnetic resonance spectroscopy; and (vii) light-scattering and diffraction methods. The first three modules will be covered during the fall term. In each module, the underlying physical theories and models will be presented and used to derive the mathematical equations applied to the analysis of experimental data. Weekly recitations will emphasize the analysis of real experimental data and understanding the applications of biophysical experimentation in published research papers.

CHEM GR6168 MATERIALS CHEMISTRY IIA. 2.50 points.
Prerequisites: CHEM UN2443, or the equivalent. This is an introductory course to the emerging field macromolecular materials chemistry. The general topics will be based on the chemistry, self-assembly, and performance of block copolymers and conjugated polymers. Particular emphasis will be devoted to the demands required to drive materials from scientific curiosity to commercialization. At the fundamental level, the course will cover topics on polymerization techniques, electronic structure of organic semiconductors, characterization strategies, nanostructures and self-assembly

CHEM GR8109 CONCISE ORGANOMETALLIC CHEM. 2.50 points.

Spring 2023
Please note that some lab fees have increased. You may consult the Directory of Classes for the most up to date fees.

CHEM UN1403 GENERAL CHEMISTRY I-LECTURES. 4.00 points.
CC/GS: Partial Fulfillment of Science Requirement
Corequisites: MATH UN1101
Corequisites: MATH UN1101 Preparation equivalent to one year of high school chemistry is assumed. Students lacking such preparation should plan independent study of chemistry over the summer or take CHEM UN0001 before taking CHEM UN1403. Topics include stoichiometry, states of matter, nuclear properties, electronic structures of atoms, periodic properties, chemical bonding, molecular geometry, introduction to quantum mechanics and atomic theory, introduction to organic and biological chemistry, solid state and materials science, polymer science and macromolecular structures and coordination chemistry. Although CHEM UN1403 and CHEM UN1404 are separate courses, students are expected to take both terms sequentially. The order of presentation of topics may differ from the order presented here, and from year to year. Students must ensure they register for the recitation that corresponds to the lecture section. When registering, please add your name to the wait list for the recitation corresponding to the lecture section (1405 for lecture sec 001; 1407 for lecture sec 002; 1409 for lecture sec 003; 1411 for lecture sec 004). Information about recitation registration will be sent out before classes begin. DO NOT EMAIL THE INSTRUCTOR. Please check the Directory of Classes for details.
### CHEM UN1404 GENERAL CHEMISTRY II - LECTURES. 4.00 points.
CC/GS: Partial Fulfillment of Science Requirement

**Prerequisites:** CHEM UN1403

Although CHEM UN1403 and CHEM UN1404 are separate courses, students are expected to take both terms sequentially. Topics include gases, kinetic theory of gases, states of matter: liquids and solids, chemical equilibria, applications of equilibria, acids and bases, chemical thermodynamics, energy, enthalpy, entropy, free energy, periodic properties, chemical kinetics, and electrochemistry. The order of presentation of topics may differ from the order presented here, and from year to year. Students must ensure they register for the recitation that corresponds to the lecture section. Please check the Directory of Classes for details.

### CHEM UN1500 GENERAL CHEMISTRY LABORATORY. 3.00 points.
CC/GS: Partial Fulfillment of Science Requirement

**Lab Fee:** $140.

**Corequisites:** CHEM UN1403, CHEM UN1404

An introduction to basic lab techniques of modern experimental chemistry, including quantitative procedures and chemical analysis. Students must register for a Lab Lecture section for this course (CHEM UN1501). Please check the Directory of Classes for details. Please note that CHEM UN1500 is offered in the fall and spring semesters. Mandatory lab check-in will be held during the first week of classes in both the fall and spring semesters. You may be asked to serve as research subjects in studies under direction of the faculty while enrolled in this course (CHEM UN1500 Sec 1, 2, 5, 7 and CHEM UN1501 Sec 1). Participation in voluntary.

CHEM UN1507 INTENSIVE GENERAL CHEMISTRY-LAB. 3.00 points.
CC/GS: Partial Fulfillment of Science Requirement
Lab Fee: $140.

Prerequisites: CHEM UN1604 or CHEM UN2045
Corequisites: CHEM UN2045
Prerequisites: CHEM UN1604 or CHEM UN2045
Corequisites: CHEM UN2045
A student-centered experimental course intended for students who are taking or have completed CHEM UN1604 (Second Semester General Chemistry Intensive Lecture offered in Fall), CHEM UN2045 (Intensive Organic Chemistry offered in Fall), or CHEM UN2046 (Intensive Organic Chemistry Lecture offered in Spring). The course will provide an introduction to theory and practice of modern experimental chemistry in a contextual, student-centered collaborative learning environment. This course differs from CHEM UN1500 in its pedagogy and its emphasis on instrumentation and methods. Students must also attend the compulsory Mentoring Session. Please check the Directory of Classes for details. Please note that CHEM UN1507 is offered in the fall and spring semesters

Spring 2023: CHEM UN1507
Course Number | Section/Call Number | Times/Location | Instructor | Points | Enrollment

CHEM UN2045 INTENSIVE ORGANIC CHEMISTRY. 4.00 points.
Prerequisites: A grade of 5 on the Chemistry Advanced Placement exam and an acceptable grade on the Department placement exam or an acceptable grade in CHEM UN1604.
Corequisites: CHEM UN1507
Prerequisites: A grade of 5 on the Chemistry Advanced Placement exam and an acceptable grade on the Department placement exam.
Corequisites: CHEM UN1507
Premedical students may take CHEM UN2045, CHEM UN2046, CHEM UN1507 and CHEM UN2545 to meet the minimum requirements for admission to medical school. This course covers the same material as CHEM UN2443-CHEM UN2444, but is intended for students who have learned the principles of general chemistry in high school OR have completed CHEM UN1604 in their first year at Columbia. First year students enrolled in CHEM UN2045-CHEM UN2046 are expected to enroll concurrently in CHEM UN1507. Although CHEM UN2045 and CHEM UN2046 are separate courses, students are expected to take both terms sequentially. A recitation section is required. Please check the Directory of Classes for details and also speak with the TA for the course

**CHEM UN2494 ORGANIC CHEM. LAB II SYNTHESIS. 0.00 points.**

Lab Fee: $62.00

Prerequisites: (CHEM UN1403 and CHEM UN1404) and CHEM UN1500 and CHEM UN2493
Corequisites: CHEM UN2444

Prerequisites: CHEM W1403-CHEM W1404; CHEM W1500; CHEM W2493. Corequisites: CHEM W2444. Please note that you must complete CHEM W2493 before you register for CHEM W2494. This lab introduces students to experimental design and trains students in the execution and evaluation of scientific data. The technique experiments in the first half of the course (CHEM W2493) teach students to develop and master the required experimental skills to perform the challenging synthesis experiments in the second semester. The learning outcomes for this lab are the knowledge and experimental skills associated with the most important synthetic routes widely used in industrial and research environments. Attendance at the first lab lecture and laboratory session is mandatory. Please note that CHEM W2494 is the second part of a full year organic chemistry laboratory course. Students must register for the lab lecture section (CHEM W2494) which corresponds to their lab section. Students must attend ONE lab lecture and ONE lab section every other week. Please contact your advisors for further information.

**CHEM UN3080 PHYSICAL CHEMISTRY II-LECTURES. 4.00 points.**

Prerequisites: CHEM UN3079
Corequisites: CHEM UN3086

Prerequisites: CHEM UN3079 Corequisites: CHEM UN3086 CHEM UN3080 covers the quantum mechanics of atoms and molecules, the quantum statistical mechanics of chemical systems, and the connection of statistical mechanics to thermodynamics. Although CHEM UN3079 and CHEM UN3080 are separate courses, students are expected to take both terms sequentially. A recitation section is required. Please check the Directory of Classes for details and also speak with the TA for the course.

**CHEM UN3086 PHYSICL-ANALYTL Laboratory II. 4.00 points.**

Lab Fee: $125 per term.

Prerequisites: CHEM UN3085, CHEM UN3086 is acceptable corequisite for CHEM UN3086.

Prerequisites: CHEM UN3085, CHEM UN3086 is acceptable corequisite for CHEM UN3086. A student-centered experimental course intended for students who are co-registered or have complete CHEM UN3079 and CHEM UN3080. The course emphasizes techniques of experimental physical chemistry and instrumental analysis, including vibrational, electronic, and laser spectroscopy; electroanalytical methods; calorimetry; reaction kinetics; hydrodynamic methods; scanning probe microscopy; applications of computers to reduce experimental data; and computational chemistry. Students must also attend the compulsory Mentoring Session. Please check the Directory of Classes for details.

**CHEM UN3098 SUPERVISED INDEPENDENT RES. 4.00 points.**

Lab Fee: $105 per term.

Prerequisites: the instructor’s permission for entrance, and the departmental representative's permission for aggregate points in excess of 12 or less than 4.

Prerequisites: the instructors permission for entrance, and the departmental representatives permission for aggregate points in excess of 12 or less than 4. This course may be repeated for credit (see major and concentration requirements). Individual research under the supervision of a member of the staff. Research areas include organic, physical, inorganic, analytical, and biological chemistry. Please note that CHEM UN3098 is offered in the fall and spring semesters.

CHEM UN3546 ADVANCED ORGANIC CHEMISTRY LAB. 3.00 points.
Laboratory Fee: $125.

Prerequisites: CHEM UN2493 and CHEM UN2494, or the equivalent.
Prerequisites: CHEM UN2493 and CHEM UN2494, or the equivalent. A project laboratory with emphasis on complex synthesis and advanced techniques including qualitative organic analysis and instrumentation.

CHEM GU4102 CHEMISTRY FOR THE BRAIN. 4.50 points.
This course was upgraded from 2.5 to 4.5 and assigned a new number.

Prerequisites: Organic chemistry and biology courses, neuroscience or neurobiology recommended, but not required.
Prerequisites: Organic chemistry and biology courses, neuroscience or neurobiology recommended, but not required. The study of the brain is one of the most exciting frontiers in science and medicine today. Although neuroscience is by nature a multi-disciplinary effort, chemistry has played many critical roles in the development of modern neuroscience, neuropharmacology, and brain imaging. Chemistry, and the chemical probes it generates, such as molecular modulators, therapeutics, imaging agents, sensors, or actuators, will continue to impact neuroscience on both preclinical and clinical levels. In this course, two major themes will be discussed. In the first one, titled Imaging brain function with chemical tools, we will discuss molecular designs and functional parameters of widely used fluorescent sensors in neuroscience (calcium, voltage, and neurotransmitter sensors), their impact on neuroscience, pros and cons of genetically encoded sensors versus chemical probes, and translatability of these approaches to the human brain. In the second major theme, titled Perturbation of the brain function with chemical tools, we will examine psychoactive substances, the basics of medicinal chemistry, brain receptor activation mechanisms and coupled signaling pathways, and their effects on circuit and brain function. We will also discuss recent approaches, failures and successes in the treatment of neurodegenerative and psychiatric disorders. Recent advances in precise brain function perturbation by light (optogenetics and photopharmacology) will also be introduced. In the context of both themes we will discuss the current and future possibilities for the design of novel materials, drawing on the wide molecular structural space (small molecules, proteins, polymers, nanomaterials), aimed at monitoring, modulating, and repairing human brain function. This course is intended for students (undergraduate and graduate) from the science, engineering and medical departments.

CHEM GU4103 ORGANO METALLIC CHEMISTRY. 4.50 points.
Prerequisites: (CHEM UN2443 and CHEM UN2444), or the equivalent. Some background in inorganic and physical chemistry is helpful but not required.
Main group and transition metal organometallic chemistry: bonding, structure, reactions, kinetics, and mechanisms.

CHEM GU4104 STRUCTURAL METHODS IN INORGANIC CHEMISTR. 2.50 points.
The determination of structures by diffraction methods, focusing on single crystal X-ray diffraction, is described. Emphasis is placed on a critical evaluation of published data.

CHEM GU4145 NMR SPECTROSCOPY. 1.00 point.
Prerequisites: elementary organic chemistry.
Prerequisites: elementary organic chemistry. Introduction to theory and practice of NMR spectroscopy. Instrumental aspects, basic NMR theory, NOE, and a survey of 2D methods are covered.

CHEM GU4232 INTRO TO MOLECULAR MODELING. 4.50 points.
Prerequisites: physical chemistry sequence.
Molecular modeling has become an integral part of research in many areas of chemistry, and in industry in drug discovery and materials design. Many experimental papers in the literature are routinely complemented by molecular modeling calculations. Experimental scientists working in industry have a significant advantage if they know how to optimally use modeling software. The course would consist of a normal lecture part plus a lab session every week in which the students learn to use modeling software by working on projects.
The goal of this course is to explore how chemical methods and concepts have impacted our ability to understand and manipulate protein structure and function. We will navigate this subject through a combination of lectures and structured discussions on research articles from the literature. The course is divided into three segments: (1) In the first part, we will review the rudiments of protein structure and function, then delve into various aspects of enzyme chemistry and polypeptide biosynthesis. (2) In the second part of the course, we will cover synthetic methods to produce and chemically modify peptides and proteins. (3) In the final part, we will discuss chemical approaches to control protein function and monitor protein activity, focusing on methods that use small molecules and mass spectrometry proteomics.

### Biophysics Courses

**CHEM GU4313 Peptide and Protein Chemistry. 4.00 points.**
Prerequisites: CHEM GU4221 and CHEM GU4230

Phase transitions and critical phenomena; renormalization group methods; classical theory of fluids.

**CHEM G8130 The Chemistry of Nanocrystals. 2.50 points.**
This course will provide a discussion of the thermodynamics and kinetics of colloidal crystallization and stabilization, the physical properties of quantum confined semiconductor and metal nanocrystals, methods of nanocrystal characterization, and examples of nanocrystals in technological applications. Prospective students should be familiar with basic principles of quantum mechanics, thermodynamics of phase transitions, and inorganic chemistry – particularly molecular orbital theory. Undergraduate students interested in this course should obtain approval from the instructor prior to registering.

**CHEM GR8232 ADV STATISTICAL MECHANICS. 2.50 points.**
Prerequisites: CHEM GU4221 and CHEM GU4230, or their equivalents. Stochastic processes; Brownian motion; Langevin equations and fluctuation-dissipation theorems; reaction rate theory; time correlation functions and linear response theory.

**CHEM GR8223 QUANTUM CHEMISTRY III. 2.50 points.**
Not offered during 2023-2024 academic year.

**CHEM GU4313 Peptide and Protein Chemistry. 4.00 points.**
Prerequisites: CHEM GU4221 and CHEM GU4230

Phase transitions and critical phenomena; renormalization group methods; classical theory of fluids.

**CHEM G8130 The Chemistry of Nanocrystals. 2.50 points.**
This course will provide a discussion of the thermodynamics and kinetics of colloidal crystallization and stabilization, the physical properties of quantum confined semiconductor and metal nanocrystals, methods of nanocrystal characterization, and examples of nanocrystals in technological applications. Prospective students should be familiar with basic principles of quantum mechanics, thermodynamics of phase transitions, and inorganic chemistry – particularly molecular orbital theory. Undergraduate students interested in this course should obtain approval from the instructor prior to registering.

### Courses Offered in Alternate Years

Contact the Undergraduate Program Manager, Vesna Gasperov (vg2231@columbia.edu), for further information.

**CHEM GU4103 ORGANOMETALLIC CHEMISTRY. 4.50 points.**
Prerequisites: CHEM UN2443 and CHEM UN2444, or the equivalent. Some background in inorganic and physical chemistry is helpful but not required. Main group and transition metal organometallic chemistry: bonding, structure, reactions, kinetics, and mechanisms.
CHEM GU4104 STRUCTURAL METHODS IN INORGANIC CHEMISTR. 2.50 points.
The determination of structures by diffraction methods, focusing on single crystal X-ray diffraction, is described. Emphasis is placed on a critical evaluation of published data.

CHEM GU4111 APPLICATIONS OF NMR SPECTROSCOPY TO INOR. 2.50 points.
The use of multinuclear NMR spectroscopy in the determination of the structures of inorganic molecules and the use of dynamic NMR spectroscopy (variable temperature NMR and magnetization transfer techniques) to provide information concerned with reaction mechanisms and their use as nanostructured materials created by self-assembly and medical treatment. This course will focus on the chemistry polymers gaining interest for the development of next generation devices and important roles in revolutionizing the way we live. Due to the advent of modern polymerization fabrication strategies, polymers are rapidly gaining interest for the development of next generation devices and medical treatment. This course will focus on the chemistry polymers and their use as nanostructured materials created by self-assembly and top-down fabrication techniques. Specifically, the class will be divided into two sections describing the uses of organic nanostructures on a) surfaces and b) as particles. Patterned surfaces will be described in terms of photo-, imprint-, and block copolymer lithography. The preparation of nanoparticles through polymer synthesis, dendrimers, and mechanical manipulation will be the second part.

CHEM GU4154 Chemical Characterization for Synthetic Chemists. 3 points.
Prerequisites: Columbia University’s laboratory safety certification is required. One year each of (i) general chemistry lecture/lab; (ii) organic or inorganic chemistry lecture/lab; and (iii) research experience in a chemistry lab are recommended.
This course will teach synthetic chemists to use mass spectrometry, analytical chromatography, and single-crystal X-ray diffraction as tools for research in synthetic chemistry. The teaching approach will be practical with an emphasis on hands-on experience. Students will gain: (1) A user-level understanding of the theory of these analytical methods. (2) Hands-on proficiency with a variety of instruments available at Columbia. (3) An introduction to advanced instrument capabilities and an awareness of their applications. (4) Proficiency in processing and interpreting data.

CHEM GU4210 Writing Workshop for Chemists. 1 point.
Prerequisites: recommended for undergraduate students to have taken at least one semester of independent research.
This course offers undergraduate and graduate students an introduction to scientific writing and provides an opportunity for them to become more familiar with the skill and craft of communicating complex scientific research. This course will provide students with the basic grammatical, stylistic and practical skills required to write effective academic journal articles, theses, or research proposals. In addition, through an innovative partnership with Columbia University Libraries’ Digital Science Center, students will learn how to apply these basic skills to their writing through the use of state-of-the-art software and on-line resources. Regular opportunities to write, peer edit and revise throughout the semester will allow students to put what they are learning into immediate practice. It is recommended that undergraduates have taken at least one semester of research for credit before taking this course. Undergraduates should plan to take this course after taking the required Core course University Writing.

CHEM GR6169 MATERIALS CHEMISTRY IIB. 2.50 points.
Prerequisites: CHEM UN2443 , or the equivalent.
CHEM GU6222 QUANTUM CHEMISTRY II. 2.50 points.
Prerequisites: CHEM GU4221

CHEM GU4104 STRUCTURAL METHODS IN INORGANIC CHEMISTR. 2.50 points.
The determination of structures by diffraction methods, focusing on single crystal X-ray diffraction, is described. Emphasis is placed on a critical evaluation of published data.

CHEM GU4111 APPLICATIONS OF NMR SPECTROSCOPY TO INOR. 2.50 points.
The use of multinuclear NMR spectroscopy in the determination of the structures of inorganic molecules and the use of dynamic NMR spectroscopy (variable temperature NMR and magnetization transfer techniques) to provide information concerned with reaction mechanisms and their use as nanostructured materials created by self-assembly and medical treatment. It is recommended that undergraduates have taken at least one semester of research for credit before taking this course. Undergraduates should plan to take this course after taking the required Core course University Writing.

CHEM GR6169 MATERIALS CHEMISTRY IIB. 2.50 points.
Prerequisites: CHEM UN2443 , or the equivalent.

CHEM GU6222 QUANTUM CHEMISTRY II. 2.50 points.
Prerequisites: CHEM GU4221
Prerequisites: CHEM GU4221 Atomic and molecular quantum mechanics: fundamentals of electronic structure, many-body wave functions and operators, Hartree-Fock and density functional theory, the Dirac equation

CHEM GR6231 INTERMEDIATE STATISTICAL MECH. 2.50 points.
Prerequisites: CHEM GU4221 and CHEM GU4230
Phase transitions and critical phenomena; renormalization group methods; classical theory of fluids.

CHEM GR8106 KINETICS. 2.50 points.
Not offered during 2023-2024 academic year.

Kinetics and mechanisms of inorganic reactions.

CHEM GR8120 Polymers in Nanotechnology. 2.5 points.
Polymeric materials have long been ubiquitous items and played important roles in revolutionizing the way we live. Due to the advent of modern polymerization fabrication strategies, polymers are rapidly gaining interest for the development of next generation devices and medical treatment. This course will focus on the chemistry polymers and their use as nanostructured materials created by self-assembly and top-down fabrication techniques. Specifically, the class will be divided into two sections describing the uses of organic nanostructures on a) surfaces and b) as particles. Patterned surfaces will be described in terms of photo-, imprint-, and block copolymer lithography. The preparation of nanoparticles through polymer synthesis, dendrimers, and mechanical manipulation will be the second part.

CHEM GR8223 QUANTUM CHEMISTRY III. 2.50 points.
Not offered during 2023-2024 academic year.

Prerequisites: CHEM GU6222.
Nonlinear spectroscopy: second harmonic and vibrational sum frequency generation; applications to surface and colloidal nano-microparticle interfaces; nonradiative molecular processes.

CHEM GR8232 ADV STATISTICAL MECHANICS. 2.50 points.
Prerequisites: CHEM GU4221 and CHEM GU4230 , or their equivalents.
Stochastic processes; Brownian motion; Langevin equations and fluctuation-dissipation theorems; reaction rate theory; time correlation functions and linear response theory.

CHEM GR8349 Research Ethics & Philosophy. 2.5 points.
This lecture course aims to address philosophical and ethical questions in scientific research. What are the most important traits of successful scientists whose discoveries have greatly benefited humanity (and led to Nobel Prizes)? What distinguishes great science from mediocre or pathological “science”? What are the ethical standards of scientific research? How do we identify scientific misconduct or fraud? Why are ethical standards so critical to the integrity of the research enterprise? The course requires extensive participation of students in the form of discussions and debates. Grades will be based on participation, writing assignments, and one oral presentation.
