Programs of Study

Environmental Science Major

The environmental science major curriculum provides an introduction to a variety of fields of study relevant to the environment. Environmental science majors are required to take three semesters of introductory courses and to develop a grounding in basic physics, chemistry, biology, and mathematics. Here, students may select courses depending on their interest. With this introduction to the Earth's environment and equipped with a knowledge of the basic sciences, students are prepared to choose a set of upper-level courses in consultation with an undergraduate adviser. All environmental science majors are required to complete a research project, providing a practical application of mastered course work. This research culminates in a senior thesis. The research and the thesis are usually done at Lamont-Doherty Earth Observatory with guidance from a faculty member or a research scientist. However, other options are also possible.

Environmental science majors have an option to complete the special concentration in environmental biology for environmental science majors.

Earth Science Major

The major in Earth science follows a similar rationale but is designed to allow students to pursue particular fields of the Earth sciences in greater depth. Compared with the environmental science major, one fewer introductory course is required, while one additional advanced course should be part of the plan of study. The Earth science major also offers the possibility of in-depth field experience through a six- to eight-week geology summer field course, arrangements for which are made through another university. The research and senior thesis capstone requirements are the same as for the environmental science major. The geology summer field course may be used as an alternative means of fulfilling the capstone requirement in the Earth science major.

Climate System Science Major

The climate system science major is designed for students who are interested in how the past, present, and future climate system works and in solution strategies for the rapidly accelerating climate crisis. The overall goal is to establish the fundamental sciences at the core of the climate system, and to inspire solution-oriented analytical thinking and expertise. The flexible course structure combines geology, physics, biology, chemistry, and math with a core in climate system science and climate solution, justice, policy and communication courses. Sample tracks through the major in sea level change, decarbonization and modern climate link to the mission and applied centers of Columbia's Climate School. We believe that any admitted student has the potential to succeed in climate science.

Climate System Science majors begin with foundational courses in the climate system and introductory courses in global warming, oceanography or other relevant topics. Supporting courses include a grounding in calculus and natural sciences. Five climate core courses include both paleoclimate and modern climate requirements, as well as three other electives. Students pursue topics in climate solutions, policy, justice and communication in courses outside the sciences, in architecture, economics, political science or engineering. All climate system science majors are required to complete a capstone experience, which can include a field course or independent research project, typically at Lamont-Doherty Earth Observatory with guidance from a leading climate scientist.
Earth and Environmental Science Minor

The Earth & Environmental Science (EES) Minor is designed to provide an introduction to the dynamics of the earth system, including interactions between the atmosphere, hydrosphere, biosphere and lithosphere. Within this minor, students can explore topics as varied as volcanic and earthquake hazards, critical mineral resources, oceanography, geodynamics, dinosaurs, and past environments on earth.

The EES minor consists of five courses within the Department of Earth and Environmental Sciences (DEES) from a choice of over 60 elective courses. These courses draw from DEES and the world-famous Lamont Doherty Earth Observatory, which together involve over 100 instructional and research faculty. The EES minor is designed to be flexible, serving both students with little to no other college-level prerequisites in math and science (’introductory minor’) and students with substantial science and math background who wish to dive deeply into a topic (’advanced minor’).

Climate System Science Minor

The Climate System Science (CSS) Minor is designed to provide an entry for students to the Department of Earth and Environmental Sciences (DEES) who might not be majoring in science, and to provide an orientation to the rapidly developing field of climate science. With a mix of science and social science electives, the coursework for the CSS Minor should be accessible to a wide range of undergraduates, including those who are interested in the basic scientific under-pinning of the climate crises as well as those who are seeking a deeper understanding of climate science.

Earth & Space Minor

The Earth & Space minor is a joint minor between the Astronomy and Earth and Environmental Science Departments -

Geology and Astronomy share a unique feature in science: they both study unreachably remote places in time and space. They are driven by observation of the natural world and their experiments must often use proxies for the quantities of interest. And they are both subjects of great interest to the general public.

Combining introductory courses in the Astronomy and Earth and Environmental Sciences Departments, this minor will:

– Give the student a solid sense of the scales we study in both space and time,
– Examine the Earth in some detail as a representative of the ~6000 planets now known,
– Situate Earth’s place in the cosmos,
– Gain some perspective on what it means for life to have evolved on this particular planet, and —provide a solid grounding in the quantitative reasoning skills scientists use.

For students who entered Columbia in or before Fall 2023

Concentrations are available to students who entered Columbia in or before Fall 2023. The requirements for the Bachelor of Arts degree, and the role of the concentration in those requirements, can be found in the Academic Requirements section of the Bulletin dated the academic year when the student matriculated at Columbia and the Bulletin dated the academic year when the student was a sophomore and declared programs of study.

Concentrations are not available to students who entered Columbia in or after Fall 2024.

The program for concentrators serves students who want more exposure to Earth and environmental science than is provided by introductory-level courses. The program aims to provide concentrators with experience in data analysis and a thorough introduction to the Earth’s systems.

The concentrations in environmental science and in Earth science are designed to give students an understanding of how the Earth works and an introduction to the methods used to investigate Earth processes, including their capabilities and limitations. Concentrators often join the social professions (e.g., business, law, medicine, etc.) and take with them a strong scientific background. They take the same introductory courses as the majors, but fewer basic science and upper-level courses are required.

In addition to the environmental science and Earth science concentrations, the department sponsors a special concentration which must be done in conjunction with the environmental biology major. Students should be aware that they must complete the environmental biology major in order to receive credit for the special concentration. There is also a special concentration in environmental biology for environmental science majors sponsored by the Department of Ecology, Evolution, and Environmental Biology.

Departmental Honors

The Department of Earth and Environmental Science awards departmental honors to the major or majors in Earth science or environmental science judged to have the best overall academic record. The award is accorded to no more than 10% of the graduating class, or one student in the case of a class smaller than 10. A grade point average of at least 3.6 in the major and a senior thesis or equivalent research of high quality are required. Students who wish to be considered should contact the director of undergraduate studies early in their senior year.

Professors

Ryan Abernathey
Nicholas Christie-Blick
Joel E. Cohen
Hugh Ducklow
Sonya Dyhrman
Peter Eisenberger
Göran Ekström
Pierre Gentine
Steven L. Goldstein
Arnold L. Gordon
Kevin L. Griffin (Chair)
Alex Halliday
Sidney R. Hemming (Director of Graduate Studies)
Bärbel Hönisch
Peter B. Kelemen
Folarin Kolawole
Galen McKinley
Jerry F. McManus (Associate Chair)
Faye McNeill
William H. Menke
John C. Mutter
Meredith Nettles
Paul E. Olsen
Terry A. Plank (Director of Undergraduate Studies)
Lorenzo M. Polvani
Substitutions and Exceptions

1. Higher-level courses may be used to satisfy supporting mathematics and science requirements for students with Advanced Placement preparation with the permission of the major adviser.

2. In addition to the courses listed for the depth, and breadth and related courses requirements, several graduate-level courses offered in the department as well as several advanced courses offered at Barnard may be substituted with the permission of the major adviser.

3. 1000-level courses in the Earth and Environmental Sciences Department cannot be used toward meeting the requirements of any of the majors, concentrations, or special concentrations.

4. The following course is not suitable for undergraduates and cannot be used toward meeting any of the requirements for the majors, concentrations, or special concentrations: EESC GU4930 EARTH'S OCEANS # ATMOSPHERE.

Grading

A grade of C- or better must be obtained for a course to count toward the majors, concentrations, or special concentrations. The grade of P is not acceptable, but a course taken Pass/D/Fail may be counted if and only if the P is uncovered by the Registrar's deadline.

Major in Earth Science

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Minors, Concentrators, and Special Concentrators above.

The major in Earth science requires a minimum of 45.5 points, distributed as follows:

Foundation Courses

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EESC UN2200</td>
<td>EARTH'S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH</td>

Capstone Experience
Select one of the following:

- EESC BC3800 ENVR SCIENCE SENIOR SEMINAR and SENIOR SEMINAR
- EESC UN3901 ENVR SCIENCE SENIOR SEM II and SENIOR SEMINAR

A six to eight week summer geology field course

Breadth and Related Fields Requirement
A minimum of 6 points (two courses) chosen with the major adviser are required.

Breadth and related field courses are science courses relevant for an Earth science major that do not require an Earth science background. Several such courses are offered at the 2000-, 3000- and 4000-level in the department and at Barnard. Examples include:

- EESC UN2100 EARTH’S ENVIRO SYST: CLIM SYST
- EESC UN2300 EARTH’S ENVIRO SYST: LIFE SYST
- EESC UN3010 FIELD GEOLOGY
- EESC BC3017 ENVIRONMENTAL DATA ANALYSIS
- EESC GU4050 GLOBAL ASSMT-REMOTE SENSING
- EESC GU4600 EARTH RESOURCES: SUSTAIN DEV
- EESC GU4917 THE EARTH/HUMAN INTERACTIONS
- EAEE E2002

Also included among breadth and related fields courses are science, mathematics, statistics, and engineering courses offered by other departments that count toward fulfilling degree requirements in those departments.

Depth Requirement
A minimum of 12 points (four courses) chosen with the major adviser to provide depth in the field of Earth science.

These courses build on the foundation and supporting courses listed above and provide a coherent focus in some area of Earth science. Students should include at least one of the following in their course of study:

- EESC UN3101 Geochemistry for a Habitable Planet
- EESC UN3201 SOLID EARTH DYNAMICS

Areas of focus include one of the courses listed above and three or more additional courses. Students are not required to specialize in a focus area, but examples are given below for those who choose to do so.

Geological Science

- EESC GU4090 INTRO TO GEOCHRONOLOGY
- EESC GU4113 Mineralogy and Mineral Resources
- EESC GU4223 SEDIMENTARY GEOLOGY
- EESC GU4230 CRUSTAL DEFORMATION
- EESC GU4701 Introduction to Igneous Petrology
- EESC GU4887 ISOTOPE GEOLOGY I
- EESC GU4947 PLATE TECTONICS AND CLIMATE

It is strongly recommended that students focusing in geological science take the summer geology field course as their capstone experience.

Geochemistry

- EESC UN3015 The Earth’s Carbon Cycle
- EESC BC3016 ENVIRONMENTAL MEASUREMENTS
- EESC BC3200 Ecotoxicology

Major in Environmental Science

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Minors, Concentrators, and Special Concentrators above.

The major in environmental science requires a minimum of 47 points, distributed as follows:
Foundation Courses

EESC UN2100  EARTH'S ENVIRO SYST: CLIM SYST
EESC UN2200  EARTH'S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH
EESC UN2300  EARTH'S ENVIRO SYST: LIFE SYST

Supporting Mathematics and Science Courses

One semester of Calculus at the level of Calculus I or higher (3 credits)
MATH UN1101  CALCULUS I

Select one of the following three-course sequences:
CHEM UN1403  GENERAL CHEMISTRY I-LECTURES
  - PHYS UN1201  and GENERAL PHYSICS I
CHEM UN1404  and GENERAL CHEMISTRY II-LECTURES
  - PHYS UN1201  and GENERAL PHYSICS I
  - PHYS UN1202  and GENERAL PHYSICS II
CHEM UN1403  and GENERAL CHEMISTRY I-LECTURES
  - EEBB UN2001  and ENVIRONMENTAL BIOLOGY I
  - PHYS UN1201  and GENERAL PHYSICS I

Capstone Experience

EESC BC3800  ENVIR SCIENCE SENIOR SEMINAR
or EESC BC3801  ENVIR SCIENCE SENIOR SEM II
EESC UN3901  SENIOR SEMINAR

Breadth and Related Fields Requirement

A minimum of 6 points (two courses) chosen with the major adviser are required.

Breadth and related field courses are science courses relevant for an environmental science major that do not require an environmental science background. Several such courses are offered at the 2000-, 3000- and 4000-level in the department and at Barnard. Examples include:

EESC BC3017  ENVIRONMENTAL DATA ANALYSIS
EESC GU4050  GLOBAL ASSMT-REMOTE SENSING
EESC GU4600  EARTH RESOURCES # SUSTAIN DEV
EESC GU4917  THE EARTH/HUMAN INTERACTIONS
EESC UN3010  FIELD GEOLOGY

Also included among breadth and related fields courses are science, mathematics, statistics, and engineering courses offered by other departments that count toward fulfilling degree requirements in those departments.

Depth Requirement

A minimum of 9 points (three courses) chosen with the major adviser to provide depth in the field of environmental science.

These courses build on the foundation and supporting courses listed above and provide a coherent focus in some area of environmental science. Students should include at least one of the following in their course of study:

EESC UN3101  Geochemistry for a Habitable Planet
  or EESC UN3201  SOLID EARTH DYNAMICS

Areas of focus include one of the courses listed above and two or more additional courses. Students are not required to specialize in a focus area, but examples are given below for those who choose to do so.

Environmental Geology
EESC GU4076  Geologic Mapping
EESC GU4480  Paleobiology and Earth System History
EAE E3221

It is recommended that students focusing in environmental geology also take EESC W4050 Remote Sensing.

Environmental Geochemistry
EESC UN3015  The Earth’s Carbon Cycle
EESC GU4885  CHEMISTRY OF CONTINENTAL WATERS
EESC GU4887  ISOTOPE GEOLOGY I
EESC GU4924  INTRO TO ATMOSPHERIC CHEMISTRY
EESC GU4888  Stable Isotope Geochemistry
EESC GU4926  INTRO TO CHEMICAL OCEANOGRAPHY

Hydrology
EESC GU4076  Geologic Mapping
EESC GU4835  Wetlands and Climate Change
EESC GU4885  CHEMISTRY OF CONTINENTAL WATERS
EESC BC3025  HYDROLOGY
EAE E3221

Climate Change
EESC UN3015  The Earth’s Carbon Cycle
EESC GU4008  Introduction to Atmospheric Science
EESC GU4330  INTRO-TERRESTRIAL PALEOClimATE
EESC GU4480  Paleobiology and Earth System History
EESC GU4835  Wetlands and Climate Change
EESC GU4920  PALEOCEANOGRAPHY

It is recommended that students focusing in environmental geology also take EESC GU4050 Remote Sensing.

Energy and Resources
EESC GU4076  Geologic Mapping
EESC GU4701  Introduction to Igneous Petrology
EAE E2002

Major in Climate System Science

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Minors, Concentrators, and Special Concentrators above.

The major in climate system science requires a minimum of 43.5 points, distributed as follows:

Foundational Courses

7.5 points minimum (2 courses):
Required:
EESC UN2100  EARTH'S ENVIRO SYST: CLIM SYST
And any one of:
EESC UN1009  GLOBAL WARMING FOR GLOBAL LEADERS
EESC UN1030  OCEANOGRAPHY
EESC UN1201  Environmental Risks and Disasters
EESC UN1600  EARTH RESOURCES # SUSTAIN DEV
  or EESC GU4600  EARTH RESOURCES # SUSTAIN DEV
EESC UN2200  EARTH'S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH
Supporting Courses

Supporting Courses  
12 points minimum (4 courses):

One semester of Calculus at the level of Calculus I or higher:
MATH UN1101  CALCULUS I

And any three courses:
PHYS UN1201  GENERAL PHYSICS I
PHYS UN1202  GENERAL PHYSICS II
CHEM UN1403  GENERAL CHEMISTRY I-LECTURES
CHEM UN1404  GENERAL CHEMISTRY II-LECTURES
EEEB UN2001  ENVIRONMENTAL BIOLOGY I
EESC UN2300  EARTH’S ENVIRO SYST: LIFE SYST

Climate System Core

15 points minimum (five courses):

Required: at least one Paleoclimate Course
EESC GU4235  SEA LEVEL CHANGE
EESC GU4330  INTRO-TERRESTRIAL PALEOCLIMATE
EESC GU4480  Paleobiology and Earth System History
EESC GU4920  PALEOCEANOGRAPHY
EESC GU4937  CENOZOIC PALEOCEANOGRAPHY

Required: at least one Modern Climate Course
EESC UN3031  CHEMISTRY OF CLIMATE
EESC UN3109  CLIMATE PHYSICS
EESC GU4008  Introduction to Atmospheric Science
EESC GU4020  HUMANS # THE CARBON CYCLE
EESC GU4040  CLIM THERMODYN/ENERGY TRANSFER
EESC GU4925  INTRO TO PHYSICAL OCEANOGRAPHY
EESC GU4930  EARTH’S OCEANS # ATMOSPHERE

Could include: Other Climate System Course
EESC BC3109 Hydrology
EESC UN3101  Geochemistry for a Habitable Planet
EESC UN3201  SOLID EARTH DYNAMICS
EESC GU4220  GLACIOLOGY
EESC GU4835  Wetlands and Climate Change
EESC GU4885  CHEMISTRY OF CONTINENTAL WATERS
EESC GU4923  Biological Oceanography
EESC GU4924  INTRO TO ATMOSPHERIC CHEMISTRY
EESC GU4926  INTRO TO CHEMICAL OCEANOGRAPHY

Could include one: Supporting EESC Course
EESC UN3400  COMPUTATIONAL EARTH SCIENCE
EESC GU4210  GEOPHYSICAL FLUID DYNAMICS
EESC GU4223  SEDIMENTARY GEOLOGY
EESC GU4240  CRUSTAL DEFORMATION
EESC GU4887  ISOTOPE GEOLOGY I
EESC GU4888  Stable Isotope Geochemistry

Climate Solutions, Justice, Policy and Communication

6 points minimum (any two courses below):

Solutions Courses
EESC BC3045 RESPONDING TO CLIMATE CHANGE (Barnard College)
ARCH UN3120  CITY/LANDSCAPE, # ECOLOGY
EAEE E2002

Climate Justice, Policy, Economics

6 points minimum (any two courses below):

Solutions Courses
ECON BC3039 ENVIRONMENTAL & NAT. RESOURCES ECONOMICS (Barnard College)
ECON UN2257  THE GLOBAL ECONOMY
EESC UN3901  SENIOR SEMINAR (taken twice, in fall and spring)

Climate System Capstone

3 points minimum (one course):

EESC 3xxx Undergraduate Research Project (course is under development)
EESC UN3901  SENIOR SEMINAR (taken twice, in fall and spring)

or EESC BC3800 followed by EESC UN3901

Approved Field Course focused on the Climate System
~6 weeks, must be proposed and then approved by DUS

Minor in Earth and Environmental Science

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Minors, Concentrators, and Special Concentrators above.

The minor in Earth and Environmental Science requires a minimum of 18 points, distributed as follows:

Foundational Courses

9 points (two courses):

Select two of the following:
EESC UN2100  EARTH’S ENVIRO SYST: LIFE SYST
Depth and Breadth Courses

9 points minimum (three courses):
Any three additional 1000, 2000, 3000, or 4000-level EESC courses.

Minor in Climate System Science

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Minors, Concentrators, and Special Concentrators above.

The minor in Climate System Science requires a minimum of 16.5 points, distributed as follows:

Foundational Courses
7.5 points (two courses):
Both required:
- EESC UN2100 EARTH’S ENVIRONMENTAL SYSTEMS: CLIM SYST
- EESC UN1009 GLOBAL WARMING FOR GLOBAL LEADERS

Climate System Module
6 points minimum (any two courses below):
Two courses from the lists below:
- EESC UN1030 OCEANOGRAPHY
- EESC UN1201 Environmental Risks and Disasters
- EESC UN2200 EARTH’S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH
- EESC UN2300 EARTH’S ENVIRO SYST: LIFE SYST
- EESC UN2330 SCIENCE FOR SUSTAINABLE DEVPT

Paleoclimate Courses
- EESC GU4235 SEA LEVEL CHANGE
- EESC GU4330 INTRO-TERRESTRIAL PALEOCLIMATE
- EESC GU4480 Paleobiology and Earth System History
- EESC GU4920 PALEOCEANOGRAPHY
- EESC GU4937 CENOZOIC PALEOCEANOGRAPHY

Modern Climate Courses
- EESC UN3031 CHEMISTRY OF CLIMATE
- EESC UN3109 CLIMATE PHYSICS
- EESC GU4008 Introduction to Atmospheric Science
- EESC GU4020 HUMANS # THE CARBON CYCLE
- EESC GU4040 CLIM THERMODYN/ENERGY TRANSFER
- EESC GU4925 INTRO TO PHYSICAL OCEANOGRAPHY
- EESC GU4930 EARTH’S OCEANS # ATMOSPHERE

Other Climate System Courses
- EESC BC3109 Hydrology
- EESC UN3101 Geochemistry for a Habitable Planet
- EESC UN3201 SOLID EARTH DYNAMICS
- EESC GU4220 GLACIOLOGY
- EESC GU4835 Wetlands and Climate Change
- EESC GU4885 CHEMISTRY OF CONTINENTAL WATERS
- EESC GU4923 Biological Oceanography

Climate Solutions, Justice, Policy and Communication
3 points minimum (any one course below):

Solutions Courses
- EESC BC3045 RESPONDING TO CLIMATE CHANGE (Barnard College)
- ARCH UN3120 CITY, LANDSCAPE, # ECOLOGY
- EAAE E2002 A BETTER PLANET BY DESIGN
- EAAE E4001 INDUST ECOLOGY-EARTH RESOURCES
- EAAE E4002 ALTERNATIVE ENERGY RESOURCES
- EAAE E4006 Field methods for environmental engineering
- EAAE E4300 INTRO TO CARBON MANAGEMENT
- EAAE E4302 CARBON CAPTURE
- EAAE E4301 CARBON STORAGE
- EAAE E4305 CO2 UTILIZATION AND CONVERSION
- CIEE E3250 ENERGY SOURCES AND CONVERSION
- SDEV GU4250 CLIMATE CHANGE: RESILIENCE # ADAPTATION

Climate Justice, Policy, Economics
- ANTH BC3932 CLIMATE CH./GLOB. MIGRATION/HUMAN RIGHTS (Barnard College)
- ANTH V3861 Anthropology of the Anthropocene
- ARCH UN3400 ENVIRONMENTAL VISUALIZATIONS OF NYC
- ECON BC3039 ENVIRONMENTAL & NAT. RES. ECONOMICS (Barnard College)
- ECON BC3040 ENVIRONMENTAL LAW (Barnard College)
- ECON UN2257 THE GLOBAL ECONOMY
- ECON GU4750 GLOBALIZATION # ITS RISKS
- POLS UN3648 GOVERNING THE GLOBAL ECONOMY
- POLS GU4814 INTERNATIONAL POLITICAL ECONOMY OF DEVELOPING COUNTRIES
- SDEV UN3355 CLIMATE CHANGE AND LAW
- SDEV UN3360 DISASTERS AND DEVELOPMENT

Minor in Earth and Space

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Minors, Concentrators, and Special Concentrators above.

The minor in Earth and Space requires a minimum of 15 points, distributed as follows:
Introductory Course

3 points minimum (one course):

One of the following:
- ASTR UN1453 ANOTHER EARTH
- ASTR BC1753 LIFE IN THE UNIVERSE
- EESC UN2300 EARTH'S ENVIRONMENTAL SYSTEMS: LIFE SYST

Astronomy Courses

6 points minimum (two courses):

Two of the following:
- ASTR UN1403 EARTH, MOON, AND PLANETS
- ASTR UN1404 STARS, GALAXIES & COSMOLOGY
- ASTR UN1420 Galaxies and Cosmology
- ASTR UN1836 STARS AND ATOMS

Or the following ASTR sequence:
- ASTR UN2001 INTRO TO ASTROPHYSICS I
- ASTR UN2002 INTRO TO ASTROPHYSICS II

DEES Courses

6 points minimum (two courses):

One of the following:
- EESC UN2200 EARTH'S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH
- EESC UN3201 SOLID EARTH DYNAMICS

Plus one of the following:
- EESC UN2100 EARTH'S ENVIRONMENTAL SYSTEMS: CLIM SYST
- EESC UN3101 Geochemistry for a Habitable Planet

For Students who entered Columbia in or before Fall 2023

Concentrations are available to students who entered Columbia in or before Fall 2023. The requirements for the Bachelor of Arts degree, and the role of the concentration in those requirements, can be found in the Academic Requirements section of the Bulletin dated the academic year when the student matriculated at Columbia and the Bulletin dated the academic year when the student was a sophomore and declared programs of study.

Concentrations are not available to students who entered Columbia in or after Fall 2024.

Concentration in Earth Science

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Concentrators, and Special Concentrators above.

The concentration in Earth science requires a minimum of 24 points, distributed as follows:

Foundation Courses
- EESC UN2100 EARTH'S ENVIRONMENTAL SYSTEMS: CLIM SYST
- or EESC UN2300 EARTH'S ENVIRONMENTAL SYSTEMS: LIFE SYST
- EESC UN2200 EARTH'S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH

Supporting Mathematics and Science Courses

Two science or mathematics courses (6-7 points) selected from among those listed for the Earth science major above.

Depth and Breadth and Related Fields Requirements

A minimum of 9 points (typically three courses) is required as follows:
- EESC UN3101 Geochemistry for a Habitable Planet
- or EESC UN3201 SOLID EARTH DYNAMICS

One additional course chosen from those listed under Depth Requirement for the Earth science major above.

The third course selected from those listed under either Depth Requirement or Breadth and Related Fields Requirement for the Earth science major above.

Concentration in Environmental Science

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Concentrators, and Special Concentrators above.

The concentration in environmental science requires a minimum of 25.5 points, distributed as follows:

Foundation Courses
- EESC UN2100 EARTH'S ENVIRONMENTAL SYSTEMS: CLIM SYST
- EESC UN2200 EARTH'S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH
- EESC UN2300 EARTH'S ENVIRONMENTAL SYSTEMS: LIFE SYST

Supporting Mathematics and Science Courses

Two science or mathematics courses (6-7 points) selected from among those listed for the environmental science major above.

Depth and Breadth and Related Fields Requirements

A minimum of 6 points (two courses) is required as follows:
- EESC UN3101 Geochemistry for a Habitable Planet
- or EESC UN3201 SOLID EARTH DYNAMICS

One additional course selected from those listed under either Depth Requirement or Breadth and Related Fields Requirement for the environmental science major above.

Special Concentration in Environmental Science for Majors in Environmental Biology

Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Concentrators, and Special Concentrators above.

The Department of Earth and Environmental Sciences sponsors a special concentration which must be done in conjunction with the environmental biology major. Students should be aware that they must complete the environmental biology major in order to receive credit for the special concentration.

The special concentration in environmental science requires a minimum of 31.5 points, distributed as follows:

Introductory Environmental Science (13.5 points)
- EESC UN2100 EARTH'S ENVIRONMENTAL SYSTEMS: CLIM SYST
- EESC UN2200 EARTH'S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH
- EESC UN2300 EARTH'S ENVIRONMENTAL SYSTEMS: LIFE SYST
**Introductory Science (6 points)**
Two courses in chemistry, physics, mathematics, or environmental biology from the supporting mathematics and science list for the environmental science major above.

**Advanced Environmental Science (12 points)**
Four courses at the 3000-level or above chosen from those recommended for the environmental science major above.

Advanced courses used to fulfill requirements in the environmental biology major cannot count toward requirements for the special concentration.

**Special Concentration in Environmental Biology for Majors in Environmental Science**
Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Concentrators, and Special Concentrators above.

The Department of Ecology, Evolution, and Environmental Biology sponsors a special concentration which must be done in conjunction with the environmental science major. Students should be aware that they must complete the environmental science major in order to receive credit for the special concentration.

The special concentration in environmental biology requires a minimum of 39 points, distributed as follows:

**Introductory Environmental Biology and Environmental Science (17 points)**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>EEEB UN2001</td>
<td>ENVIRONMENTAL BIOLOGY I</td>
</tr>
<tr>

**Advanced Environmental Biology (9 points)**
Three additional advanced EEEB courses (3000-level and above), each chosen from a different curricular area (evolution/genetics, ecology/behavior/conservation, anatomy/physiology/diversity, biology laboratory courses).

Advanced courses used to fulfill requirements in the environmental science major cannot count toward requirements for the special concentration.

**Sustainable Development**
Students interested in sustainable development should refer to the Sustainable Development section in this Bulletin.

Students interested in sustainable development should refer to the Sustainable Development section in this Bulletin.

**Concentration in Environmental Science**
Please read Guidelines for all Earth Science, Environmental Science, & Climate System Science Majors, Concentrators, and Special Concentrators above.

The concentration in environmental science requires a minimum of 25.5 points, distributed as follows:

**Foundation Courses**

Advanced courses used to fulfill requirements in the environmental science major cannot count toward requirements for the special concentration.

Fall 2023

EESC UN1001 DINOSAURS AND HISTORY OF LIFE. 4.00 points.
CC/GS: Partial Fulfillment of Science Requirement
Given in alternate years.

Prerequisites: Recommended preparation: basic high school science and math.
Prerequisites: Recommended preparation: basic high school science and math. Lab is a hands-on introduction to geochronology, paleontology, and historical geology with field trips. (See W1401 for lectures only.) Dinosaurs: a spectacular example of a common, highly successful form of life, dominant for 135 million years. Where did they come from? Why were they so successful? Why did they die out? ... or did they? A basic introduction to the historical sciences and the interface between geology and biology

EESC UN1030 OCEANOGRAPHY. 3.00 points.
CC/GS: Partial Fulfillment of Science Requirement
Enrollment limited to 160.

Explore the geology of the sea floor, understand what drives ocean currents and how ocean ecosystems operate. Case studies and discussions centered on ocean-related issues facing society

Fall 2024: EESC UN1030
Course Number Section/Call Times/Location Instructor Points Enrollment
EESC 1030 001/11442 T Th 11:40am - 12:55pm Room TBA Baerbel Hoenisch 3.00 149/160

EESC UN1201 Environmental Risks and Disasters. 3 points.
CC/GS: Partial Fulfillment of Science Requirement
Priority given to first-years and sophomores.

Prerequisites: high school science and math.
An introduction to risks and hazards in the environment. Different types of hazards are analyzed and compared: natural disasters, such as tornados, earthquakes, and meteorite impacts; acute and chronic health effects caused by exposure to radiation and toxic substances such as radon, asbestos, and arsenic; long-term societal effects due to environmental change, such as sea level rise and global warming. Emphasizes the basic physical principles controlling the hazardous phenomena and develops simple quantitative methods for making scientifically reasoned assessments of the threats (to health and wealth) posed by various events, processes, and exposures. Discusses methods of risk mitigation and sociological, psychological, and economic aspects of risk control and management.

Fall 2024: EESC UN1201
Course Number Section/Call Times/Location Instructor Points Enrollment
EESC 1201 001/11443 T Th 10:10am - 11:25am Room TBA Goran Ekstrom 3 33/60
EESC UN1401 DINOSAUR # HISTORY OF LIFE-LEC. 3.00 points.
CC/GS: Partial Fulfillment of Science Requirement
Given in alternate years.

Prerequisites: Recommended preparation: basic high school science and math.
Prerequisites: Recommended preparation: basic high school science and math. Dinosaurs: a spectacular example of a common, highly successful form of life, dominant for 135 million years. Where did they come from? Why were they so successful? Why did they die out? ... or did they? A basic introduction to the historical sciences and the interface between geology and biology

EESC UN1600 EARTH RESOURCES # SUSTAIN DEV. 3.00 points.
CC/GS: Partial Fulfillment of Science Requirement

Prerequisites: none; high school chemistry recommended.
Prerequisites: none; high school chemistry recommended. Survey of the origin and extent of mineral resources, fossil fuels, and industrial materials, that are non renewable, finite resources, and the environmental consequences of their extraction and use, using the textbook Earth Resources and the Environment, by James Craig, David Vaughan and Brian Skinner. This course will provide an overview, but will include focus on topics of current societal relevance, including estimated reserves and extraction costs for fossil fuels, geological storage of CO2, sources and disposal methods for nuclear energy fuels, sources and future for luxury goods such as gold and diamonds, and special, rare materials used in consumer electronics (e.g. :Coltan; mostly from Congo) and in newly emerging technologies such as superconducting magnets and rechargeable batteries (e.g. heavy rare earth elements, mostly from China). Guest lectures from economists, commodity traders and resource geologists will provide ;real world; input. Discussion Session Required

EESC UN2100 EARTH'S ENVIRO SYST: CLIM SYST. 4.50 points.
Prerequisites: high school algebra. Recommended preparation: high school chemistry and physics; and one semester of college science. Origin and development of the atmosphere and oceans, formation of winds, storms and ocean currents, reasons for changes through geologic time. Recent influence of human activity: the ozone hole, global warming, water pollution. Laboratory exploration of topics through demonstrations, experimentation, computer data analysis, and modeling. Students majoring in Earth and Environmental Sciences should plan to take EESC W2100 before their senior year to avoid conflicts with Senior Seminar

Spring 2024: EESC UN2100 Course Number Section/Call Number Times/Location Instructor Points Enrollment
EESC 2100 001/12424 T Th 10:10am - 11:25am 603 Schermerhorn Hall Mingfang Ting, Gisela Winkler 4.50 39/50

EESC UN2200 EARTH’S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH. 4.50 points.
CC/GS: Partial Fulfillment of Science Requirement
Priority given to Columbia and Barnard earth science, environmental science, and environmental biology majors should enrollment limits be necessary.
Prerequisites: high school algebra and chemistry. Recommended preparation: high school physics.
Recommended preparation: high school chemistry and physics; and one semester of college science. Exploration of how the solid Earth works, today and in the past, focusing on Earth in the Solar system, continents and oceans, the Earth’s history, mountain systems on land and sea, minerals and rocks, weathering and erosion, glaciers and ice sheets, the hydrological cycle and rivers, geochronology, plate tectonics, earthquakes, volcanoes, energy resources. Laboratory exploration of topics through examination of rock samples, experimentation, computer data analysis, field exercises, and modeling. Columbia and Barnard majors should plan to take W2200 before their senior year to avoid conflicts with the Senior Seminar

EESC UN2330 SCIENCE FOR SUSTAINABLE DEVP. 3.00 points.
CC/GS: Partial Fulfillment of Science Requirement
The course provides students with an understanding of Earth’s natural systems that is essential to addressing the multi-faceted issues of sustainable development. After completing the course, students should be able to incorporate scientific approaches and perspectives into their research in other fields or policy decisions and be able to use scientific methods of data analysis. The semester will highlight the climate system and solutions from both physical and ecological perspectives; water resources; food production and the cycling of nutrients; and the role of biodiversity in sustainable development. The course emphasizes key scientific concepts such as uncertainty, experimental versus observational approaches, prediction and predictability, the use of models, and other essential methodological aspects

EESC UN3101 Geochemistry for a Habitable Planet. 3 points.
Prerequisites: Any 1000-level or 2000-level EESC course; MATH UN1101 Calculus I and CHEM UN1403 General Chemistry I or their equivalents. The origin, evolution, and future of our planet, based on the book How to Build a Habitable Planet by Wallace S. Broecker. This course will focus on the geochemical processes that built Earth from solar material, led to its differentiation into continents and ocean, and have maintained its surface at a comfortable temperature. Students will participate in a hands-on geochemistry project at Lamont-Doherty Earth Observatory.

EESC GU4085 GEODYNAMICS. 3.00 points.
CC/GS: Partial Fulfillment of Science Requirement
Given in alternate years.

Prerequisites: calculus, differential equations, introductory physics. An introduction to how the Earth and planets work. The focus is on physical processes that control plate tectonics and the evolution of planetary interiors and surfaces; analytical descriptions of these processes; weekly physical model demonstrations.

EESC GU4113 Mineralogy and Mineral Resources. 4.00 points.
Prerequisites: introductory geology or the equivalent, elementary college physics and chemistry, or the instructor's permission.

Prerequisites: introductory geology or the equivalent, elementary college physics and chemistry, or the instructors permission. Minerals come in dazzling colors, amazing shapes and with interesting optical effects. But mineralogy is also an essential tool for the understanding of Earth evolution. Minerals represent fundamental building blocks of the Earth system and planetary bodies. Minerals form through geological and biological processes such as igneous, metamorphic and sedimentary from high to low temperatures, from the deep interior to the Earth's surface and related to volcanism, tectonics, weathering, climate and life. Minerals are one of our most important sources of information on such processes through Earth's history. Minerals also represent important natural resources and are fundamental to the global economy and modern technology as we know it. In this course, we will approach mineralogy from the standpoint of earth and environmental sciences, the study of mineralogy however is of interest to many other sciences including Material Sciences, Planetology, Archeology, Biology, Chemistry and Physics with most of the 20 Nobel Prizes awarded for research involving crystals being in these last fields. The goal of this class is to (1) understand the physical and chemical properties of minerals, (2) learn techniques of mineral identification with an emphasis on optical mineralogy, (3) understand the relationship between minerals and the broader geological context.

EESC GU4330 INTRO-TERRESTRIAL PALEOC LIMATE. 3.00 points.
CC/GS: Partial Fulfillment of Science Requirement
Given in alternate years.

Understanding the fundamental processes driving our Climate System is more important than ever. In this course, I will give an overview of the archives in which evidence of terrestrial paleoclimate is preserved, the approaches to developing and applying proxies of climate from these archives, approaches for constraining the time represented by the information, and interpretations that have been developed from such archives. Important archives to be included are ice cores, caves, wetlands, lakes, trees, and moraines. The time interval covered will be mostly the last few tens of thousands of years, and chronometers based on radiocarbon, U-series and cosmogenic nuclide dating will be presented. A particular emphasis will be put on natural climate processes and interactions that are relevant for the ongoing climate crisis and potential solutions, including a Climate Justice module toward the end of the course. The course will consist of formal lectures that alternate with recitation and discussing examples and problem solving.

**EESC UN1010 Geolo Excur to Death Valley, CA. 2.00 points.**
Enrollment limited to 20.

The trip is restricted to first-years and sophomores from Columbia College/General Studies, Barnard College, and the School of Engineering and Applied Science. Early application is advised, and no later than November 12. A spring-break excursion focused on the geology of Death Valley and adjacent areas of the eastern California desert. Discussion sessions ahead of the trip provide necessary background. Details at: https://eesc.columbia.edu/content/eesc-un1010

- **Spring 2024: EESC UN1010**
  - Course Number: EESC 1010
  - Section/Call Number: 001/12416
  - Times/Location: F 9:30pm - 7:00pm
  - Instructor: Felix Waldhauser
  - Points: 2.00
  - Enrollment: 20/20
EESC UN2100 EARTH’S ENVIRO SYST: CLIM SYST. 4.50 points.
Prerequisites: high school algebra. Recommended preparation: high school chemistry and physics; and one semester of college science. Origin and development of the atmosphere and oceans, formation of winds, storms and ocean currents, reasons for changes through geologic time. Recent influence of human activity: the ozone hole, global warming, water pollution. Laboratory exploration of topics through demonstrations, experimentation, computer data analysis, and modeling. Students majoring in Earth and Environmental Sciences should plan to take EESC W2100 before their senior year to avoid conflicts with Senior Seminar.

EESC UN2200 EARTH’S ENVIRONMENTAL SYSTEMS: THE SOLID EARTH. 4.50 points.
CC/GS: Partial Fulfillment of Science Requirement Priority given to Columbia and Barnard earth science, environmental science, and environmental biology majors should enrollment limits be necessary.

Prerequisites: high school algebra and chemistry. Recommended preparation: high school physics.
Recommended preparation: high school chemistry and physics; and one semester of college science. Exploration of how the solid Earth works, today and in the past, focusing on Earth in the Solar system, continents and oceans, the Earth’s history, mountain systems on land and sea, minerals and rocks, weathering and erosion, glaciers and ice sheets, the hydrological cycle and rivers, geochronology, plate tectonics, earthquakes, volcanoes, energy resources. Laboratory exploration of topics through examination of rock samples, experimentation, computer data analysis, field exercises, and modeling. Columbia and Barnard majors should plan to take W2200 before their senior year to avoid conflicts with the Senior Seminar.
EESC UN3010 FIELD GEOLOGY. **3.00 points.**

Fee: to be determined.

The centerpiece of this course is a geological field trip during Spring Break in Barbados. The class will meet weekly before the trip to prepare for it and after the trip to synthesize what was learned and to create a field guide. Subjects to be covered: plate tectonics, convergent plate margins and accretionary prisms, local Barbados geology; ice ages, Milankovitch cycles, sea level; introduction to coral reefs and fossil coral reef geology; Barbados terrestrial ecology; limestone caves, hydrology; dating methods; overview of Barbados history, economy, culture. In order to observe the modern-day coral reef (the modern day live analog to the fossil coral reefs we will see) the class will go snorkeling. In order to observe the effects of cave formation and water flow in limestone terrains the class will participate in an extensive visit to a cave. The class will also participate in an exercise in geological mapping of a series of coral reef terraces. Priority: Priority is given to junior and senior majors and concentrators in Earth Science or Environmental Science at Columbia College and the School of General Studies, and Barnard College Environmental Science majors and minors. Others (non-DEES majors and non-Barnard Environmental Science students) may also be allowed to enroll if space permits. All students need permission of the instructor. Students who sign up will be put on a waitlist and will be considered after contacting the instructor.

EESC UN3109 CLIMATE PHYSICS. **3.00 points.**

This is a calculus-based treatment of climate system physics and the mechanisms of anthropogenic climate change. By the end of this course, students will understand: how solar radiation and rotating fluid dynamics determine the basic climate state, mechanisms of natural variability and change in climate, why anthropogenic climate change is occurring, and which scientific uncertainties are most important to estimates of 21st century change. This course is designed for undergraduate students seeking a quantitative introduction to climate and climate change science. EESC V2100 (Climate Systems) is not a prerequisite, but can also be taken for credit if it is taken before this course.

EESC UN3201 SOLID EARTH DYNAMICS. **3.00 points.**

Prerequisites: any 1000-level or 2000-level EESC course; MATH UN1101 Calculus I and PHYS UN1201 General Physics I or their equivalents. Concurrent enrollment in PHYS UN1201 is acceptable with the instructor’s permission.

Prerequisites: any 1000-level or 2000-level EESC course; MATH UN1101 Calculus I and PHYS UN1201 General Physics I or their equivalents. Concurrent enrollment in PHYS UN1201 is acceptable with the instructor’s permission. Properties and processes affecting the evolution and behavior of the solid Earth. This course will focus on the geophysical processes that build mountains and ocean basins, drive plate tectonics, and otherwise lead to a dynamic planet. Topics include heat flow and mantle circulation, earthquakes and seismic waves, gravity, Earth’s magnetic field, and flow of glaciers and ice sheets.

EESC UN3901 SENIOR SEMINAR. **3.00 points.**

Prerequisites: EESC BC3800 or EESC BC3801 and a good grounding in basic sciences.

Guided, independent, in-depth research culminating in the senior thesis in the spring. Includes discussion about scientific presentations and posters, data analysis, library research methods and scientific writing. Students review work in progress and share results through oral reports. Weekly seminar to review work in progress and share results through oral and written reports.

EESC GU4090 INTRO TO GEOCHRONOLGY. **3.00 points.**

CC/GS: Partial Fulfillment of Science Requirement

Given in alternate years.

Prerequisites: one term of college-level calculus, and solid Earth system science or its equivalent.

An overview of approaches to estimating ages of sedimentary sequences and events in Earth history; to be co-listed at Stony Brook and other universities. Includes discussion about scientific presentations and posters, data analysis, library research methods and scientific writing. Students review work in progress and share results through oral reports. Weekly seminar to review work in progress and share results through oral and written reports.

EESC GU4210 GEOPHYSICAL FLUID DYNAMICS. **3.00 points.**
Required course for M.A./Ph.D. candidates focusing in physical oceanography and atmospheric sciences. Elective for undergraduate majors in the Department of Earth and Environmental Sciences.

Prerequisites: APMA E3101, APMA E3201 or equivalents and APPH E4200 or equivalent or the instructor's permission.
Prerequisites: APMA E3101, APMA E3201 or equivalents and APPH E4200 or equivalent or the instructors permission. Fundamental concepts in the dynamics of rotating stratified flows. Geostrophic and hydrostatic balances, potential vorticity, f and beta plane approximations, gravity and Rossby waves, geostrophic adjustment and quasigeostrophy, baroclinic and barotropic instabilities

EESC GU4300 THE EARTH'S DEEP INTERIOR. **3.00 points.**
Prerequisites: Vector calculus, differential equations, one year of college physics (mechanics, electromagnetism, waves)
An overview of the geophysical study of the Earth, drawing upon geodesy, gravity, seismology, thermal studies, geomagnetism, materials science, and some geochemistry. Covers the principal techniques by which discoveries have been made, and are made, in deep Earth structure. Describes fundamental properties and features of the crust, mantle, and core

EESC GU4560 THE ECOLOGY OF TREELINE IN A CHANGING CLIMATE. **3.00 points.**
Prerequisites: Introductory Biology. Earth Science and one course in ecology recommended. Treelines are the boundaries between forests and low stature alpine and tundra vegetation, thought to be controlled by climate and therefore likely to respond to climate change. In 1807 Alexander von Humboldt and Aimé Bonpland described treeline as a global phenomenon and a bioclimatological reference that all other vegetation could be referenced against. Despite being clearly linked to climate, the mechanisms that control treeline formation and persistence remain an active area of scientific research and debate. The lack of a complete mechanistic understanding of how climate controls the location of treeline opens the important question of how treeline will respond to climate change. Furthermore, while physical site characteristics determine the potential location of treeline, trees may be absent for a variety of factors, complicating the predicted ecosystem response to a changing climate. These factors include local peculiarities of the environment, a regional lack of capable species, or a multitude of disturbances, including those caused by humans. This course is focused on the ecology treeline in light of global climate change and will provide students with a foundational understanding of fundamental ecological concepts as they pertain to this important ecological boundary between ecosystems and biomes. In addition, students will learn to (1) find, read, and discuss the primary scientific literature, and (2) communicate their findings via written, oral, and audio-visual formats. Topics include ecophysiology, population ecology, community ecology, biogeochemistry and ecosystem ecology

EESC GU4885 CHEMISTRY OF CONTINENTL WATERS. **3.00 points.**
Given in alternate years.

Prerequisites: Recommended preparation: a solid background in basic chemistry.
Prerequisites: Recommended preparation: a solid background in basic chemistry. Introduction to geochemical cycles involving the atmosphere, land, and biosphere; chemistry of precipitation, weathering reactions, rivers, lakes, estuaries, and groundwaters; students are introduced to the use of major and minor ions as tracers of chemical reactions and biological processes that regulate the chemical composition of continental waters

Prerequisites: Compliments GU4937 Cenozoic Paleoenography, intended as part of a sequence with GU4330 Terrestrial Paleoclimate. For undergrads, UN2100 Earth System: Climate or equivalent, or permission of instructor.

Prerequisites: Compliments GU4937 Cenozoic Paleoenography, intended as part of a sequence with GU4330 Terrestrial Paleoclimate. For undergrads, UN2100 Earth System: Climate or equivalent, or permission of instructor. The course examines the ocean's response to external climatic forcing such as solar luminosity and changes in the Earth's orbit, and to internal influences such as atmospheric composition, using deep-sea sediments, corals, ice cores and other paleoenographic archives. A rigorous analysis of the assumptions underlying the use of climate proxies and their interpretations will be presented. Particular emphasis will be placed on amplifiers of climate change during the alternating ice ages and interglacial intervals of the last few million years, such as natural variations in atmospheric greenhouse gases and changes in deep water formation rates, as well as mechanisms of rapid climate change during the late Pleistocene. The influence of changes in the Earth's radiation distribution and boundary conditions on the global ocean circulation, Asian monsoon system and El Nino/Southern Oscillation frequency and intensity, as well as interactions among these systems will be examined using proxy data and models. This course complements W4937 Cenozoic Paleoenography and is intended as part of a sequence with W4330 Terrestrial Paleoclimate for students with interests in Paleoclimate.

Prerequisites: Physics UN1201, Chem UN1403, & Math UN1201 (Calc III), or their equivalents. Recommended: EESC UN2100 or EESC GU4008.

Prerequisites: Physics W1201, Chemistry W1403, Calculus III, or equivalent or the instructors permission. EESC W2100 preferred. Physical and chemical processes determining atmospheric composition and the implications for climate and regional air pollution. Atmospheric evolution and human influence; basics of greenhouse effect, photolysis, reaction kinetics; atmospheric transport of trace species; stratospheric ozone chemistry; tropospheric hydrocarbon chemistry; oxidizing power, nitrogen, oxygen, sulfur, carbon, mercury cycles; chemistry-climate-biosphere interactions; aerosols, smog, acid rain.
